### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 120 (75%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.84

Intersection Signal Delay: 18.2

Intersection LOS: B

Intersection Capacity Utilization 92.7%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 6: 53-Dawsonville Hwy & Academy Sports

## Lanier Tract DRI

## 8: Dawsonville Highway/GA 53 &amp; McEver Road/McEver

phase two p.m.

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 52 (33%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.80

Intersection Signal Delay: 154.3

Intersection LOS: F

Intersection Capacity Utilization 112.3%

ICU Level of Service H

Analysis Period (min) 15

Splits and Phases: 8: Dawsonville Highway/GA 53 & McEver Road/McEver

## Lanier Tract DRI

## 9: Dawsonville Highway &amp; Greenhill Circle/Greenhill Circle

phase two p.m.

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 130

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 68.5

Intersection LOS: E

Intersection Capacity Utilization 91.0%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 9: Dawsonville Highway & Greenhill Circle/Greenhill Circle

## Lanier Tract DRI

## 10: Dawsonville Highway &amp; Shallowford Rd/Best Buy

Harbour Point Community Association  
3313 Harbour Point Parkway  
Gainesville, Georgia 30506  
April 25, 2017

Subject: Oak Hall Development

Mayor Danny Dunagan  
300 Henry Ward Way  
Suite 303  
P.O. Box 2496  
Gainesville, Georgia 30501

Dear Mayor Dunagan:

My name is Gary Lawrence and I currently serve as the President of the Harbour Point Community Association Board. Harbour Point is a Community of 290 households located on Route 53, about 5.5 miles west of the proposed Oak Hall Development on Ahaluna Drive. Our Board recently received a presentation on this Development and has the following concerns.

1 Our residents are currently experiencing significant delays in exiting our Community onto Route 53. These delays occur not only during rush hours but throughout the day, 7 days a week. GDOT has reported a growth of more than 2000 vehicles a day that pass our entrance from 2015 to 2016, due to the widening project and the many new businesses located in the corridor. This traffic is projected to grow regardless of any new development. Many of our residents are avoiding the traffic congestion enroute to Gainesville, by turning west and doing their shopping in Dawsonville.

2 The traffic in this already congested corridor will be exacerbated by the Oak Hall Development. The GPAB had cancelled a March 7 Public Hearing due the lack of current traffic data to assess the impact of traffic from this Development. A traffic study by Arcadis Consulting was commissioned to gather the needed data. The result of the study is currently planned for mid to late May. In their haste to obtain project approval, the GPAB has now scheduled the hearing for May 9, which will not allow adequate time for the appropriate review of the study's findings and the development of traffic remediation efforts needed to approve the development.

3        There appears to be no plan to reprioritize traffic enhancement Tier 2 projects to Tier 1 status to address the immediate need for something to be done in time for the Oak Hall Development. We perceive that the current plan is to approve the project and then to worry about the resultant traffic congestion later. We contend that the City and County should at least have a plan for traffic remediation and controlling signal light sequences, but that will not be enough. We need additional lane capacity and turning lanes, etc. before the project comes on line.

4        Harbour Point certainly understands the value of new development and the need for additional affordable housing for our beautiful City of Gainesville. To approve the project without having a clear understanding of potential traffic problems and a short term plan to address these issues is dangerous for the overall image and livability of Gainesville. We recommend that the Developer, GDOT and all of the other parties develop a traffic remediation plan and locate the monies to make it happen before the project is approved.

As Mayor of our great City, I ask that you have the steps required for the approval of this Development sequenced appropriately, so that we are in front of the problem with new roadway capacity and not scrambling after the congestion is upon us. Thank you for your attention to this important issue.

Sincerely,

Gary Lawrence

cc:    Bryan Lackey, City Manager  
      City Council  
      GPAB Members

REVISED 2017-01-27

**RESERVATION OF CONSTITUTIONAL AND LEGAL RIGHTS - ANNEXATION**

This Reservation of Constitutional and Other Legal Rights ("the Reservation") is intended to supplement and form a part of the annexation and rezoning application (including any request for zoning, conditional use permit and variances)(the "Application") of the Applicant and the owners of the Subject Property and to put the City of Gainesville on notice of the Applicant's assertion of its constitutional and legal rights.

The Applicant has filed a timely application, has provided all required information and has submitted the appropriate application fees. The application meets all judicial and statutory requirements for approval.

A refusal by the City of Gainesville to approve the Application, as requested by the Applicant, will impose a disproportionate hardship on the Applicant and owners of the Subject Property without benefiting any surrounding property owners. There is no reasonable use of the Subject Property under any other zoning classification and no resulting benefit to the public from designation to any other classification.

A refusal by the City of Gainesville to approve the Application, as requested by the Applicant, will prohibit the only viable economic use of the Subject Property, will constitute an illegal taking of the Applicant's and owners' properties, and will be unconstitutional and will discriminate in an arbitrary, capricious and unreasonable manner between the Applicant and owner and the owners of similarly

---

situated properties in violation of the Georgia Constitution of 1983, as amended and the Constitution of the United States.

Furthermore, this Reservation also constitutes an Ante Litem Notice pursuant to O.C.G.A. § 36-11-1, which places the City of Gainesville and all other agents of the City on notice of the Applicant's and owners' intent to seek monetary damages and attorney's fees against the City of Gainesville for any rezoning action, zoning condition, illegal impact fee and any other unlawful restrictions and exactions that are imposed on the Subject Property, the Applicant and the owners.

Finally, this Reservation also constitutes an Ante Litem Notice pursuant to O.C.G.A. § 36-11-1, which places Hall County and any third parties on notice of the Applicant's and owners' intent to defend any action intended to thwart the annexation of the Subject Property into the City of Gainesville.

By filing this Reservation, the Applicant reserves all rights and remedies available to it under the United States Constitution, the Georgia Constitution, all applicable federal, state, and local laws and ordinances, and in equity, against all persons and entities.

The Applicant and owners respectfully request that this Application be approved as requested by the Applicant and in the manner shown on the Application, which is incorporated herein by reference. This Reservation forms an integral part of the Application, and we ask that the City of Gainesville include this Reservation with the Applicant's other application documents. The Applicant and owners reserve the right to amend and supplement this Reservation at any time.

Sincerely,

Ethan Underwood,  
Attorney for the Applicant

## AGENDA REQUEST

---

**Date Submitted:** 4/25/2017

**Presenter:** Matt Tate

**Item of Business:** Request from **Oak Hall Companies, LLC** to rezone a 157.98± acres tract located on the east side of Dawsonville Highway (S.R. 53), having road frontage on Ahaluna Drive, Skyview Drive, Strickland Drive, Lakeshore Circle, West Lake Drive and Karen Lane (a/k/a **0, 1264 and 1817 Ahaluna Drive; 1876 Dawsonville Highway; 2208 Karen Lane; 0 and 2029 Strickland Drive; 0 and 1489 West Lake Drive**) from Residential-I-A (R-I-A), Residential-I (R-I), Planned Unit Development (P-U-D) and Regional Business (R-B) to Planned Unit Development (P-U-D) and General Business (G-B).  
Ward Number: One  
Tax Parcel Number(s): 00-109B-000-003A; 00-110-000-001, 006, 030, 031, 034, 035, 036, 037 and 038;  
01-110-001-006; 01-110A-004-022; 01-114-001-001, 026, 145  
and 161  
Request: Mixed-use development

**Meeting Date:** 5/9/2017

---

**Purpose of Request:**

The applicant is proposing to rezone the subject property with a zoning of Planned Unit Development (P-U-D) and is to be included as part of the previously described 208.79± acres proposed mixed-use development. The property contains mostly undeveloped land with the exception of four single-family homes.

**History/Background:**

All three **Oak Hall Companies, LLC** agenda items were tabled at the March 14, 2017 PAB meeting after staff reviewed the requests and determined that the applicant needed to provide additional traffic data prior to staff giving an official recommendation. Therefore, PAB tabled the items for a period of 60-days to be scheduled for the May 9, 2017 Planning and Appeals Board meeting.

**Facts & Issues for Consideration:**

**Department Recommendation:**

Planning staff is recommending approval with twenty-four conditions.

**Department Director:**

Rusty Ligon

**GAINESVILLE PLANNING and APPEALS BOARD  
STAFF RECOMMENDATION**

**Applicant** ..... Oak Hall Companies, LLC

**Property Owners** ..... America's Home Place, Inc.; West Ahaluna, LLC; Barry Conner, LLC; Soque, LLC; Olen Stephens

**Location** ..... See below

**Request** ..... Annex 50.81<sup>±</sup> acres with Planned Unit Development (PUD) and General Business (G-B) zoning

**Request** ..... Rezone 157.98<sup>±</sup> acres from Residential-I-A (R-I-A), Residential-I (R-I), Planned Unit Development (P-U-D) and Regional Business (R-B) to Planned Unit Development (P-U-D) and General Business (G-B)

**Total Acres** ..... 208.79<sup>±</sup> acres total

**Ward** ..... One

**Proposed Use** ..... Mixed-use, age-restricted community

**Planning Division Staff Recommendation** ..... **Approval, with conditions**

**Date** ..... May 9, 2017

---

▪ **Location**

50.81<sup>±</sup> acres annexation - 0 and 1758 Ahaluna Drive; 1508, 1550, 1740, 1746, 1758, 1760, 1934 and 1982 Dawsonville Highway; 300 and 301 Skyview Drive; 0, 2008 and 2016 Strickland Drive

157.98<sup>±</sup> acres rezoning - 0, 1264 and 1817 Ahaluna Drive; 1876 Dawsonville Highway; 2208 Karen Lane; 0 and 2029 Strickland Drive; 0 and 1489 West Lake Drive

▪ **Applicant's Proposal and Background Information**

A 110.9<sup>±</sup> acres portion of the subject property was annexed and rezoned in 2014 and 2015 to Planned Unit Development (P-U-D) and Residential-I-A (R-I-A) with conditions for a 199 lot single-family subdivision. The applicant at that time was West Ahaluna, LLC and the property has remained undeveloped.

The current proposal includes the annexation of 50.81<sup>±</sup> acres and the rezoning of 157.98<sup>±</sup> acres for a total of 208.79<sup>±</sup> acres. Of the total acreage, 185.02<sup>±</sup> acres will be zoned Planned Unit Development (P-U-D) and 23.77<sup>±</sup> acres zoned as General Business (G-B). Because the proposal is a master planned mixed-use development, both the annexation and rezoning requests are being presented together.

The subject 50.81<sup>±</sup> acres portion of property is being considered for annexation with a zoning of Planned Unit Development (P-U-D) and General Business (G-B). The property is currently zoned Agricultural Residential-III (AR-III), Residential-II (R-II) and Highway Business (H-B) within

unincorporated Hall County. Of the 50.81<sup>±</sup> acres, approximately 30.80<sup>±</sup> acres will be zoned P-U-D and 20.01<sup>±</sup> acres will be zoned G-B. The city limits are contiguous to the subject property to the north, south, east and west. The property contains numerous residential and commercial structures, out buildings and a cellular tower and has road frontage on Ahaluna Drive, Dawsonville Highway, Strickland Drive and Skyview Drive.

The subject 157.98<sup>±</sup> acres portion of property is being considered for rezoning from Residential-I-A (R-I-A), Residential-I (R-I), Planned Unit Development (P-U-D) and Regional Business (R-B) to Planned Unit Development (P-U-D) and General Business (G-B). This property is currently located within the city limits. Of the 157.98<sup>±</sup> acres, approximately 154.22<sup>±</sup> acres will be zoned P-U-D and 3.76<sup>±</sup> acres will be zoned G-B. The property contains mostly undeveloped land with the exception of four single-family homes and has road frontage on Ahaluna Drive, Dawsonville Highway, Karen Lane, Strickland Drive and West Lake Drive, and is west of the terminus of Lakeshore Circle.

The development proposes a master planned development designed as an “age in place” community. The applicant anticipates the residential portion of the development will be built-out over a period of 6 years from when the first land development permit is issued. The office and commercial component of the development will be constructed upon market conditions. A total of 790 residential units are proposed that will comply with applicable U. S. Department of Housing and Urban Development (HUD) rules for age-restricted communities. The mixture of housing proposed includes: 305 single-family detached homes; 79 single-family cottages; 81 detached terrace homes; 175 independent living units and 150 assisted living units which could include up to 30 memory care units. Therefore, 37% of the overall residential units for the entire development are located within the independent and assisted living facilities. Amenities are to consist of a swimming pool, club house, passive park and two community docks totaling 130 boat slips. A total of 68.0 acres or 37% of the development will be open green space.

Non-residential uses are to include a 40,000 square foot storage facility for residents within the community, 24,000 square feet of retail/office/restaurant space, seven commercial parcels each having approximately 8,000 square feet of building space and a 3.0 acres tract of land reserved for a 10,650<sup>±</sup> square foot fire station. Access is proposed from Dawsonville Highway, Ahaluna Drive and Strickland Drive. Some of the proposed development standards are listed below. A full description is provided with the application.

#### Residential

- Proposed Density: 4.43 units/acre
- Average home price: Single-family- \$400,000 to \$700,000; Terrace homes- \$300,000; Cottages- High \$200,000; Independent Living- \$2,800 to \$4,000 per month.
- Proposed Minimum House Size: 1,500 square feet of heated floor space for single-family detached homes; 500 square feet of heated floor space for single-family cottages; and 1,100 square feet attached / detached terrace homes.
- Building Materials: No vinyl or aluminum siding allowed. Exterior facade may include brick, stone, hard coat stucco, hardiboard or a combination thereof. Accent material such as copper roofing, cedar shake, hardiboard or a combination of such materials may be used not to exceed 50% of the facade. Roofing materials may include cedar shake, architectural shingles or metal as appropriate to the architectural style of each home.
- Lot Width: Single-family detached homes - 40 feet (83<sup>±</sup> lots); 50 feet (126<sup>±</sup>-lots); 60 feet (56<sup>±</sup> lots); 80 feet (40<sup>±</sup> lots).
- Unit Width: Cottage homes- Minimum 15 feet, Terrace homes- Minimum 24 feet.
- Maximum Height: Single-family detached- 40-feet; Cottage homes and Terrace homes- 30-feet; Independent Living, Assisted Living and Memory Care- 75-feet.

- Setbacks: Each unit will have a minimum of 18-feet of driveway from the back of the sidewalk to the building face or 20-feet from the back of the curb when there is no sidewalk.  
Single-family detached- Front: 15-feet; Side: 3-feet; Rear interior lot: 10-feet; Cottages homes and Terrace homes – Front, Side and Interior Rear will have zero foot (0') lot lines; Minimum of 10-feet of building separation.  
Independent Living, Assisted Living and Memory Care- Front: 40-feet; Side: 20-feet; 25-foot interior rear and 50-foot exterior rear.
- Water and Sewer: Provided by the City of Gainesville. When all phases are complete, water will be looped from Ahaluna Drive to Strickland Drive. Sewer will require several pump stations with gravity to Dawsonville Highway which has ample capacity.
- Streets: All interior streets and driveways are proposed to be publically owned and maintained. 50-foot right-of-way widths; 24-foot pavement widths; 4-foot wide sidewalks on at least one side of each residential road. It is intended that the side streets serving the cottages, terrace homes and the Independent / Assisted Living will be private.
- Parking: Each single-family detached home and terrace home will have a 2 car garage; Cottage homes will have surface parking for two vehicles.
- Garbage Pickup: Provided by the City of Gainesville.

#### Commercial

- Maximum building coverage: 70% of lot
- Maximum building height: 75-feet
- Minimum landscaped open space: 10%
- Minimum front landscape strip: 10-feet; Side and rear landscape strip: 6-feet
- Setbacks: Front: 40-feet from the right-of-way; Side: 10-feet; Interior rear: 25-feet; Adjacent to residential use: 50-feet
- Minimum Parking: City of Gainesville standards for use.
- Building Materials: Building exteriors not screened from view of a public right-of-way or any property line shall have an architectural treatment of brick, brick/frame, stone, stucco, or another architectural treatment approved by the Community Development Director.

#### ▪ **Adjacent Land Use and Zoning**

The subject property is positioned near the northwestern edge of the city limits between Dawsonville Highway (S.R. 53) and Lake Sidney Lanier. The property fronting Dawsonville Highway (SR 53) is located within the Gateway Corridor Overlay Zone. Single-family homes and undeveloped land surround the subject property to its north, south and east, some of which are located off of Ahaluna Drive, Watauga Drive, Sportsman Club Road, Strickland Drive, Karen Lane and within the Lakeshore Heights Subdivision. These properties are zoned Residential-I (R-I) within the City of Gainesville and Agricultural Residential-III (AR-III), Residential-I (R-I) and Vacation Cottage (V-C) within Hall County. There are also single-family homes to the west located off Skyview Place in the City zoned Residential-I (R-I) as well as Skyview Lane and Skyview Drive zoned Agricultural Residential-III (AR-III) in the County.

Commercial properties can be found to the north, south and west located along Dawsonville Highway. These properties include various retail stores, restaurants, convenience store/gas station, mini warehouses, boat sales, boat dock manufacturing and multi-family apartments. These properties are zoned Highway Business (H-B) within Hall County and General Business (G-B), Regional Business (R-B), Residential-II (R-II) and Planned Unit Development (P-U-D) within Gainesville. Recent significant development includes the Northlake Square shopping center and several outparcel developments located to the south zoned General Business (G-B) within the City of Gainesville.

## ▪ **Traffic Impact Study Summary**

A Traffic Impact Study was completed for the proposed development on January 24, 2017 and later revised on April 7, 2017 by Marc R. Acampora, PE, LLC Traffic Engineering. Most of the traffic counts were collected on Thursday, November 17, 2016 from 7:00 A.M to 9:00 A.M. and from 4:30 P.M. to 6:30 P.M. The counts at the North Lake Square entrance were collected on Wednesday, March 22, 2017. The magnitude of the side street volumes were found to be very comparable with the counts performed for this current study, and generally slightly higher. However, the volumes on the major streets were consistently notably higher for this current study. Historic Georgia DOT 24-hour traffic counts were also collected in the vicinity from the year 2015. The annual daily traffic volume on SR 53 north of Sportsman Club Road was 25,600 vehicles per day. The entire project is expected to generate 189 new trips in the a.m. peak hour, 274 new trips in the p.m. peak hour, and 3,387 new trips during a 24-hour weekday. The study extended one mile from the limits of the proposed site and included the following nine intersections:

1. Sportsman Club Road at Strickland Drive
2. Dawsonville Highway at Sportsman Club Road
3. Dawsonville Highway at Avonlea Way
4. Dawsonville Highway at Canterbury Road
5. Dawsonville Highway at Ahaluna Drive
6. Dawsonville Highway at North Lake Square Shopping Center Entrance
7. Dawsonville Highway at Beechwood Boulevard
8. Dawsonville Highway at McEver Road
9. Dawsonville Highway at Green Hill Circle
10. Dawsonville Highway at Shallowford Road

A summary of the study revealed that future operations, upon the project being fully constructed and operational, at the below intersections would have extremely heavy traffic flows rated LOS F. LOS "F" is a condition of extremely heavy flow, with frequent stoppage and very slow speeds. Traffic is unstable and often comes to a complete halt. These intersections include:

1) A.M. and P.M. peak hour southbound approach at Dawsonville Highway at Sportsman Club Road; 2) A.M. and P.M. peak hour eastbound and westbound left turn at Dawsonville Highway and Avonlea Way; 3) A.M. and P.M. peak hour eastbound and westbound left turn at Dawsonville Highway and Canterbury Road; 4) A.M. and P.M. peak hour westbound approach at Dawsonville Highway and Ahaluna Drive; 5) A.M. and P.M. peak hour eastbound left turn at Dawsonville Highway and Beechwood Boulevard; 6) P.M. peak hour northbound Dawsonville Highway at McEver Road; 7) A.M. / P.M. peak hour eastbound approach at Dawsonville Highway and McEver Road; 8) P.M. peak hour westbound approach at Dawsonville Highway at Green Hill Circle; and 9) P.M. peak hour eastbound approach at Dawsonville Highway and Shallowford Road.

The summary of findings and recommendations of the study are as follows:

### **Sportsman Club Road at Strickland Drive**

No changes are recommended at this intersection for the existing, no-build, or Future Phase One and Future Phase Two conditions.

### **Dawsonville Highway at Sportsman Club Road**

The side street delays at this intersection are significant now and will increase in the future. 1) While a warrant analysis was not performed as part of this traffic impact study, the low side street volumes make the intersection an unlikely candidate for signalization. The potential for justifying

signalization will increase in the future, but side street volumes will continue to remain moderate. 2) This study also identifies the need for a northbound exclusive right turn lane to be added on GA 53 at Sportsman Club Road. Northbound and southbound exclusive left turn lanes are currently provided at this median break.

#### **Dawsonville Highway at Avonlea Way**

Side street delays are high at the existing eastbound approach of Avonlea Way, and these delays will increase in the no-build and future conditions. The side street volumes are predominately right turners, with extremely low left turn volumes. 1) The Lanier Tract will introduce a new fourth leg at the Avonlea Way intersection (there is an existing private residential driveway at this median break, which would be replaced by the Lanier Tract access). Northbound and southbound exclusive left turn lanes are currently provided at this median break. The volumes exiting the new Lanier Tract access will be low and many of them will be right turners. Therefore, this intersection is considered unlikely to be a candidate for signalization in the existing, no-build, and Future Phases One and Two, even with the addition of the Lanier Tract trips. 2) The Georgia DOT right turn lane analysis suggests that a northbound exclusive right turn lane should be considered at this access and the site plan includes the addition of this lane. 3) The new site access should be constructed with one entering lane and one exiting lane. 4) The side street approach exiting the site should be controlled by side street stop sign and accompanying stop bar.

#### **Dawsonville Highway at Canterbury Road**

Side street delays are high on the existing eastbound approach of Canterbury Road and these delays will increase in the no-build and future conditions. As with Avonlea Way, the side street volumes at this intersection are predominately right turners, with extremely low left turn volumes. For this reason, this intersection is considered an unlikely candidate for signalization in the existing, no-build, and Future Phase One conditions. The outparcel access will align with Canterbury Road and the Lanier Tract will connect through the outparcels to GA 53 at this location. Northbound and southbound exclusive left turn lanes are currently provided at this median break. A short southbound deceleration lane is provided on GA 53 at Canterbury Road, though this lane does not appear to have been constructed to current Georgia DOT design standards. The northbound right turn volume will be low in the Future Phase One condition, and the Georgia DOT right turn lane analysis indicates that no decel lane will be required for Future Phase One. 1) However, with the future development of the retail outparcels, by others, the right turn volumes will be significant, primarily due to the outparcels, and a northbound deceleration lane is recommended for this location. The Future Phase Two side street volumes exiting the outparcels will be notable and this intersection will likely be a prime candidate for signalization upon development of the outparcels. 2) It is recommended that at such time as the outparcels are planned to be developed, a signal warrant study be performed for this intersection according to the standards set forth in the Federal Highway Administration's *Manual On Uniform Traffic Control Devices* (MUTCD). 3) This new access at the Canterbury Road median break should be constructed with at least one entering lane and an exiting shared left/through lane and an exclusive right turn lane. The two westbound lanes are in anticipation of the development of the outparcels. With only the Lanier Tract volumes, only one entering and one exiting lane would be required. 4) Until signalization is warranted, the side street approach exiting the outparcel tracts should be controlled by side street stop sign and accompanying stop bar.

#### **Dawsonville Highway at Ahaluna Drive**

1) The review of Georgia DOT auxiliary lane standards indicates that a northbound right turn lane should be added on GA 53 at Ahaluna Drive in the existing condition. 2) The future volumes exiting Ahaluna Drive would benefit from the addition of a second westbound lane, resulting in a shared left/through lane and an exclusive right turn lane on Ahaluna Drive at GA 53. This second lane would reduce the demand for side street green time on the signal and improve side street

levels of service. It was noted that the need for relocation of the signal steel strain pole, a drainage structure, and possibly a large brick monument sign, may reduce the feasibility of adding this second westbound lane. 3) With the addition of Lanier Tract DRI southbound left turns, consideration should be given to adding a protected / permissive southbound left turn phase, which would match the existing protected / permissive phasing for the northbound left turn. The Georgia DOT left turn phase warrants are not satisfied for this southbound left turn based on volume projections alone. However, other factors such as high speeds on GA 53 and the senior residents expected to reside at the Lanier DRI, merit consideration. 4) Field observations suggest that there may be an opportunity to shorten the cycle length, which would reduce time spent by vehicles waiting on the side street.

#### **Dawsonville Highway at North Lake Square Access**

This intersection operates acceptably in all analysis conditions. The side street approaches do incur some delays at all times, primarily due to the long cycle length on the signal, which allocates most of the green time, appropriately, to GA 53. The side street delays are incurred by minimal volumes in the a.m., since the retail served by the side streets are generally not operational at that time. Higher volumes incur the side street delays in the p.m., when the retail is operational. However, overall this intersection operates appropriately and no mitigation is recommended for any analysis condition.

#### **Dawsonville Highway at Beechwood Boulevard**

At the GA 53 / Beechwood Boulevard intersection, it is noted that a fourth leg is currently stubbed-out across from Beechwood Boulevard and a retail development is under construction on that site. Auxiliary left and right turn lanes are provided on GA 53 serving Beechwood Boulevard and the future fourth leg appears to be designed for right-in / right-out access only, with a northbound deceleration lane provided on GA 53. No other changes are recommended at this intersection based on this study.

#### **Dawsonville Highway at McEver Road**

The lane configuration and signal phasing at this intersection are generally appropriate. 1) The existing southbound right turn volume is sufficiently-high (828 a.m., 481 p.m.) to merit consideration of the addition of a second exclusive right turn lane and/or the addition of a protected right turn overlap phase. The justification for adding this phasing and/or second right turn lane will increase as volumes increase. 2) Finally, there may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.

#### **Dawsonville Highway at Green Hill Circle**

This signalized intersection incurs high side street delays, again, due to the allocation of the majority of green time to the Dawsonville Highway approaches. 1) There may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.

#### **Dawsonville Highway at Shallowford Road**

The lane configuration and signal phasing are appropriate for this intersection. 1) Reduction of the cycle and optimization of the allocation of green time could reduce delays and queuing at this intersection.

#### **▪ Other Departmental Comments**

According to the Georgia Department of Transportation, the applicant will need to coordinate with GDOT since this develop will impact the State Route System.

The Gainesville Public Works Department has recommended additional transportation improvements which are stated within the traffic zoning conditions listed below.

The Gainesville Department of Water Resources states that the City currently has adequate water and sanitary capacity for the proposed development. The developer will be required to construct extensions for both water and sanitary sewer to connect the existing City facilities, along with pump stations required for areas of the development unable to utilize gravity sanitary sewer for conveyance.

The Gainesville Police Department's primary concern will be the increased traffic accidents from the additional cars on the Dawsonville Highway corridor.

A Development of Regional Impact Study (DRI #2638) was submitted for this development. Upon review of the proposal, the Georgia Mountains Regional Commission states that the proposal does not present any potential adverse inter-jurisdictional impacts, assuming the project will be in compliance with State and local regulations and the Gainesville-Hall Metropolitan Planning Organization.

▪ **Zoning History**

*The following zoning actions have taken place in the immediate area during the last ten years:*

**2015** – A request by West Ahaluna, LLC to annex a 8.74± acres tract with a zoning of Residential-I-A (R-I-A) located at 0 and 1264 Ahaluna Drive was conditionally approved for no proposed use.

**2014** – A request by West Ahaluna, LLC to annex a 70.23± acres tract with a zoning of Planned Unit Development (P-U-D) located at 0 and 1817 Ahaluna Drive; 1982 Dawsonville Highway; 2208 Karen Lane; 2008, 2016 and 2029 Strickland Drive was approved with conditions. In addition, the same applicant requested to rezone a 31.93± acres tract located at 0 Ahaluna Drive NW and 1489 West Lake Drive NW from Residential-I (R-I) to Planned Unit Development (P-U-D) was also approved with conditions for a 199-lot single-family subdivision.

**2013** – A request by America's Home Place, Inc. to rezone a 25.11± acres tract located at 0 and 1198 Dawsonville Highway; 1232 Ahaluna Drive and 1162 Lakeshore Circle from Residential-I (R-I), Residential-II (R-II) and Office and Institutional (O-I) to General Business (G-B) zoning for a commercial shopping center was approved with conditions.

**2012** – A request by America's Home Place, Inc. to rezone a 4.711± acres tract located at 0, 1122, 1138, 1162 and 1198 Dawsonville Highway from Residential-II (R-II), Office and Institutional (O-I) and General Business (G-B) to General Business (G-B) zoning for retail, restaurant and vehicle service uses was approved with conditions.

**2011** – A request by Kauffman Tire Inc. for a special use within Regional Business (R-B) zoning on a 1.19± acres tract located at 801 & 805 Dawsonville Highway was approved with conditions for an automotive tire and service store.

**2010** – A request by Bill Dupree to annex a 7.11± acres tract with General Business (G-B) zoning and rezone a 2.44± acres tract from Residential-II (R-II) to General Business (G-B) located at 0, 1293, 1297 and 1139 Dawsonville Highway was approved with conditions for a business center with retail, office and restaurant uses.

▪ **Staff Analysis**

**(1) Is the proposed use suitable in view of the zoning and development of adjacent and nearby property?**

The proposed mixed-use development is suitable based on the surrounding uses. The subject property is located adjacent to both residential and commercial uses with zonings of Agricultural Residential-III (AR-III), Residential-I (R-I), Vacation Cottage (V-C), Planned Unit Development (P-U-D), Highway Business (H-B), General Business (G-B) and Regional Business (R-B). Much of the development within the immediate area has included significant commercial growth with some limited new housing.

**(2) Will the proposed use adversely affect the existing use or usability of adjacent or nearby property?**

The subject property is currently zoned and approved for residential and commercial purposes. The proposed development is master planned and proposes more residential housing.

Given the size of the property, it is expected the proposed mixed-use development will have impacts to traffic movements along Dawsonville Highway which are currently strained during the holiday period and certain peak times. As the proposed development becomes built out over time, additional traffic will slow turning movements at some nearby Dawsonville Highway intersections. Transportation improvements as identified within the traffic study and zoning conditions will be necessary to help reduce negative impacts to Dawsonville Highway and nearby intersections. Of note, with the proposed residents being mostly age restricted, the traffic created is typically less than if proposed as a traditional subdivision.

In addition, due to the proposed developments proximity to Lake Lanier, environmental impacts should be properly mitigated through improved storm water measures. Sedimentation ponds and bioretention areas will be required within the development to help protect the lake. In addition, the Corps of Engineers will require the applicant to install rip rap to protect the shoreline near the proposed two community boat docks due to the additional boat traffic.

**(3) Is the proposed use compatible with the purpose and intent of the Comprehensive Plan?**

The Gainesville Future Development Map places the subject property within the *Low-Medium Density Residential* land use category and the *Mixed Use General* land use category. The *Low-Medium Density Residential* land use category includes areas containing or planned for single-family detached or semi-detached housing at densities up to 4.0 dwelling units per acre. The proposal has a density of 4.27 dwelling units per acre for the 185.02± acres portion of property to be zoned Planned Unit Development (P-U-D). The *Mixed Use General* land use category includes areas containing or planned for a mixture of land uses including office, neighborhood retail, and residential.

The subject property is also located within the *Suburban Residential* and *Suburban Commercial* Character Areas. The goal of this character area is to preserve older, stable residential subdivisions and encourage newer projects with smaller lot sizes, pedestrian infrastructure, and buildings patterned after traditional local housing, possibly containing a small neighborhood-serving "village center". Mixed-use neighborhood design is desired but not required. In areas where natural features or sensitive environments are important, cluster housing or conservation subdivision design may be appropriate. Community access points and shoreline restoration are encouraged as part of future development on greenfield parcels between Dawsonville Highway

and Lake Lanier. Land uses allowed within the *Suburban Residential* area include low-density residential, medium density residential, multi-family residential, public / institutional, commercial, and parks / recreation / conservation and mixed use.

The *Suburban Commercial* area will continue to grow as a regional retail center for the City and Hall County, but should diversify over time to include multi-family housing and a higher-density mix of retail, office, services and high-quality employment. In addition, expanding premium retail could offer a variety of shopping options that are currently not available elsewhere in the City. As it grows, the area will become one of the most prominent commercial corridors and gateways into the City, and a thriving economic anchor for the northwest side. When development occurs, adequate buffers should be maintained around development to protect watersheds and sensitive environments. Land uses allowed within the *Suburban Commercial* area include commercial, public / institutional, multi-family residential and mixed use.

**(4) Are there substantial reasons why the property cannot or should not be used as currently zoned?**

The subject property is currently zoned for single-family and commercial purposes and could be developed as such. It is estimated that a total of 341 residential homes could be constructed within the entire development based on the existing zoning in the City and County. However, water and sewer services are necessary in order to develop the subject property for the desired use and density. Due the amount of undeveloped land and green space, the subject property should be carefully planned as opposed to developed piecemeal. Master planned communities typically provide for better uniformity and higher development standards such as building quality, connectivity, common space, landscaping, environmental protection and services that would otherwise not be provided to the residents.

**(5) Will the proposed use cause an excessive or burdensome use of public facilities or services, including but not limited to streets, schools, water or sewer utilities, and police or fire protection?**

The subject property and surrounding development currently utilizes City water and sewer services and there is sufficient capacity to serve the development. Water and sewer extension to the development will be required.

As listed in the above summarized Traffic Impact Study for this project, the entire project will generate 189 new trips in the a.m. peak hour, 274 new trips in the p.m. peak hour, and 3,387 new trips during a 24-hour weekday. The improvements as identified within the study and the proposed zoning conditions are strongly recommended by staff to help mitigate some of the traffic concerns.

Existing public safety services respond to the adjacent and nearby properties. Gainesville Fire Station #1 is located approximately 3.2 miles away from the furthest proposed residential lot. As well, Hall County Fire Station #13 off of Sardis Road is also located approximately 3.4 miles away. Gainesville and Hall County currently have an “automatic aid” agreement for emergency services that was first established in 1997. The agreement allows the agency that is closest to an incident to respond despite municipal boundaries. Regardless, the amount of proposed single-family homes will put additional strain on fire services due to the subject properties proximity to the existing city limits which could impact the City’s ISO rating. However, a 3.0 acres tract of land is planned for a future City fire station which would front Dawsonville Highway.

According to the Gainesville Police Department, increased traffic accidents from the additional cars on the Dawsonville Highway corridor are a primary concern.

No impacts to the school system are expected as the development is an age restricted community. Of note, a portion of the subject property was previously approved for 199 homes which were not age restricted. No comments or concerns were received by the school system regarding this request.

**(6) Is the proposed use supported by new or changing conditions not anticipated by the Comprehensive Plan or reflected in the existing zoning on the property or surrounding properties?**

It is staff's opinion that proposed mixed-use is consistent with the Gainesville Comprehensive Plan but the number of units should be reduced to be within density range. The property is located within a residential area between Dawsonville Highway and Lake Lanier, and is near Gainesville's most active regional commercial corridors. Existing uses along Dawsonville Highway south of the bridge consists of mostly commercial in nature excluding a few large apartment complex developments (Park Creek, Carrington Park and Lake Lanier Club), and some isolated single-family homes within Hall County. Numerous properties fronting this segment of Dawsonville Highway have been developed for non-residential purposes over the past 15 to 20 years. Some examples of this include the Northlake Square shopping center, Carrington Park retail center, Village Shoppes of Gainesville, Home Depot, Best Buy, McEver Corners shopping center, Texas Roadhouse, Olive Garden, Cheddar's, Buffalo Wild Wings and a child day care facility. A 94-room Holiday Inn Express is currently under construction behind the Cheddars restaurant.

The proposed mixed-use development appears to be of high quality and would serve as an appropriate transitional use for the area between Dawsonville Highway and the residential uses adjacent to Lake Lanier. As well, the proposal will provide for additional shopping opportunities and a mixture of housing needed within Gainesville that will further help sustain the Dawsonville Highway corridor.

**(7) Does the proposed use reflect a reasonable balance between the promotion of the public health, safety, morality, or general welfare and the right to unrestricted use of property?**

Due to the subject property's proximity to existing residential and commercial land uses, the proposed mixed-use development, with the recommended conditions of zoning appears to promote a reasonable balance between the interests of the City, the property owner, and neighboring residents and property owners.

---

▪ **Staff Recommendation**

The Planning Division staff is recommending **conditional approval** of the proposed annexation and rezoning request based on the Comprehensive Plan and the adjacent residential and non-residential land uses.

## **Conditions**

### **Development Standards**

1. The development standards within the applicant's narrative, concept plan and architectural renderings shall be made part of the zoning ordinance, and shall be subject to the Community Development Director approval. Any zoning conditions adopted as part of this zoning ordinance that conflict with the applicant's narrative, concept plan and architectural renderings shall take precedence over the applicant's development standards.
2. Prohibited commercial uses shall include motels or hotels with rooms accessed from the exterior of the building, adult novelty stores, adult entertainment centers, pawn shops, gas stations, tire stores, massage parlors except for practitioners licensed by the State of Georgia, vaping stores, auto body shops, automobile sale establishments, marine sales or repair stores, automated or non-automated car wash, coin-laundry facilities, truck stop, tattoo parlors, psychics, fortune tellers, clairvoyants and the like.
3. The applicant's revised concept plan and narrative proposes a total of 790 senior residential units. The total number of residential units approved for the development shall not exceed 770 senior residential units. The reduction of 20 residential units may occur anywhere within the development. However, a minimum of 10 residential units shall include single-family homes, cottages and terrace homes with frontage along Ahaluna Drive and adjacent to existing single-family properties located off of Karen Lane, Watauga Drive and West Lake Drive.
4. The development shall comply with applicable U. S. Department of Housing and Urban Development (HUD) rules for age-restricted communities. The organization established for the management of the development shall comply with HUD rules for verification of occupancy and shall maintain procedures for routinely determining the occupancy of each unit. Such procedures may be part of a normal leasing or purchasing agreement and must provide for regular updates as required by HUD.
5. All proposed single-family detached homes shall have a minimum front yard setback of 20-feet as measured from the right-of-way line and shall have a minimum distance of 10-feet between houses. Additionally, all cottages with frontage along Ahaluna Drive shall have a minimum front yard setback of 20-feet as measured from the right-of-way line and shall have a minimum distance of 10-feet between houses. The lots that back up to existing residences located off of Karen Lane, Watauga Drive and West Lake Drive shall have minimum 20-feet rear setbacks.
6. The following buffer standards shall be required:
  - a. A minimum 20-foot wide buffer shall be required for all proposed single-family detached homes, cottages and terrace homes where adjacent to existing single-family homes.

year of the effective date of this zoning ordinance for the future construction of a City of Gainesville fire station. All costs associated with deeding the property shall be at the full expense of the developer. Architectural design for the fire station must be approved by both the City of Gainesville and the developer, and shall be substantially similar with residential and commercial standards submitted with the application.

13. No more than 10% of the units within the proposed indoor storage facility may be leased to non-residents of the proposed development.

#### **Transportation / Traffic**

14. Prior to the issuance of a land disturbance permit, the developer shall provide a signal warrant analysis be performed per Georgia Department of Transportation (GDOT) standards for each of the following two intersections:

- a. Dawsonville Highway (SR 53) at Avonlea Way and the new access road; and
- b. Dawsonville Highway (SR 53) at Canterbury Road and the new access road. The design of the signal warrant analysis should account for the probability that GDOT will not approve a signal at this location and should evaluate the intersection for an R-CUT design at the median break. If a traffic signal is approved by GDOT, improvements for a traffic signal at the intersection will require approval of the Gainesville Public Works Director and GDOT Traffic Operations Office.

All costs associated with the signal warrant analysis study, and if warranted by such study, any costs associated with the installation of a traffic signal and intersection improvements shall be at the full expense of the developer.

15. The developer shall perform the following traffic improvements identified within the Summary of Study Findings and Recommendations as stated within the revised Traffic Impact Study, dated April 7, 2017, for the proposed development:

- a. Dawsonville Highway (SR 53) at Avonlea Way and the new access road to include a northbound exclusive right turn lane to be added on Dawsonville Highway (SR 53) turning into new site driveway and the inclusion of one entering lane and one exiting lane for the new site access to be controlled by side street stop sign and accompanying stop bar; and
- b. Dawsonville Highway (SR 53) at Canterbury Road and the new access road to include a northbound exclusive right turn lane to be added on Dawsonville Highway (SR 53) turning into new site driveway and the inclusion of one entering lane and one exiting lane for the new site access to be controlled by side street stop sign and accompanying stop bar.

The developer shall coordinate these improvements with GDOT and the Gainesville Public Works Director prior to permitting. The Gainesville Public Works Director and GDOT shall have the final determination of the time line of these improvements based on the developer's proposed construction schedule. All costs associated with the improvements shall be at the full expense of the developer.

16. Prior to the issuance of a land disturbance permit for the Planned Unit Development (P-U-D), the developer shall evaluate, design and construct the left turn lanes on Dawsonville Highway (SR 53) to meet GDOT storage and design requirements at Avonlea Way and the new site driveway at Canterbury Road. Prior to the issuance of a land disturbance permit for the commercial development zoned General Business (G-B), the developer shall evaluate, design and construct the left turn lanes on Dawsonville Highway (SR 53) to meet GDOT storage and design requirements. If the existing left turn lane at this location meets these requirements, this condition will be deemed satisfied.
17. Developer consents to pay \$425,000.00 to be used solely for the purpose of making roadway improvements along Dawsonville Highway (SR 53) from McEver Road (SR 53) to Ahaluna Drive. In this regard, the developer shall deposit \$100,000.00 upon issuance of the initial land disturbance permit for the Planned Unit Development (P-U-D), and annually thereafter an additional \$100,000.00 until the full \$425,000.00 is paid in full (provided, the fourth and final payment will be for \$125,000.00). All such payments will be deposited into an escrow account at a financial institution chosen by the City of Gainesville. The City of Gainesville shall choose an escrow agent, who shall be authorized to disburse the funds to the City of Gainesville as said funds are needed to make roadway improvements along Dawsonville Highway (SR 53) from McEver Road (SR 53) to Ahaluna Drive. The amount as stated above is based on the cost estimate previously provided by the City of Gainesville to the developer for roadway improvements in addition to those improvements referenced elsewhere in the zoning conditions affecting the property that is the subject of the zoning application.
18. Prior to the issuance of a land disturbance permit, the intersection of Strickland Drive, Karen Lane and the new access road to the proposed development shall be redesigned to include realignment similar to what is shown on the revised concept plan for better traffic circulation, and to meet current roadway design criteria. The improvements shall be completed prior to permitting direct access from the development onto Karen Lane and Strickland Drive and prior to the construction of the most northern Pod of terrace and cottage homes. All costs associated with the improvements shall be at the full expense of the developer.
19. Prior to the issuance of a land disturbance permit, the developer shall seek verification from Hall County to determine whether or not any improvements will be required to the intersection of Sportsman Club Road and Strickland Drive.
20. All new streets shall meet the standards within the current Gainesville Unified Land Development Code. These same standards shall be required for the segment of Ahaluna Drive starting at the north side of the existing power line easement and adjacent to the entrance of the terrace homes, and shall extend in a northeasterly direction south of Watauga Drive where the city limits terminate. The remaining portions of Ahaluna Drive within the city limits shall meet the City of Gainesville Standards excluding the requirements of curb and gutter. All other residential uses, amenities, office and commercial areas shall provide for pedestrian connectivity throughout the development. All costs associated with the improvements shall be at the full expense of the developer.

21. Prior to the issuance of a land disturbance permit, the developer shall seek approval from the City of Gainesville and the Corps of Engineers to improve the existing Ahaluna Drive cul-de-sac to provide for better turn around for emergency and utility vehicles. If approved, curb and gutter and sidewalks shall be extended to the Ahaluna Drive cul-de-sac. All road and traffic improvements to Ahaluna Drive shall be at the expense of the developer and shall meet the standards within the current Gainesville Unified Land Development Code prior to acceptance. All cul-de-sacs constructed or modified as part of the development will be positioned (subject to Corps of Engineers, and City of Gainesville approval, as needed) on the west side of the road, in approximately the current location of the existing cul-de-sac but positioned in a way that would minimize the impact to the lots on the east side of the road. The final design shall require approval from the City of Gainesville.
22. There shall be no driveways from individual homes allowed onto Ahaluna Drive for lots that have road frontage on any new proposed interior street. There shall be no driveways from individual homes allowed onto Karen Lane or Strickland Drive.
23. There shall be no access allowed onto West Lake Drive and Skyview Drive.
24. The proposed commercial, retail and office outparcels shall provide inter parcel connectivity to one another.

| <b>ROW Access:</b>       | <b>Dawsonville Hwy (SR53), Ahaluna Drive, &amp; Strickland Drive</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

This statement is intended to comply with the application procedures established by The City of Gainesville, GA for submittal of applications for annexation as required by the City of Gainesville Unified Land Development Code (the "ULDC"), City of Gainesville Public Hearing Application Requirements, and other City of Gainesville Ordinances and Standards and is intended to serve as the Narrative Report required by the ULDC. As part of this Narrative Report, the Applicant asserts the statements contained in the Application for Zoning Actions package, submitted herewith incorporated herein by reference, and as may be amended (the "Application"), describing justification for the requested zoning and for any request of variances, in any, as if such were fully stated herein.

The Applicant proposes to zone a total of 208.79 acres, consisting of the Subject Property's 157.98 acres, which currently located within the City of Gainesville, together with an adjoining 50.81 acre-Annexation Property located in unincorporated Hall County. The Applicant has submitted a concurrent annexation application for the unincorporated 50.81 acres, and incorporates all statements therein into this Application for Zoning Actions.

Approval of the annexation and the concurrent zoning application would yield 185.02 acres zoned PUD, and an additional 23.77 acres zoned G-B, all located within the City.

## **I. Land Uses and Development Summary**

The Applicant proposes to develop the Proposed Use on the Subject Property. The Subject Property is adjoined by residential dwellings along Lake Lanier to the north, east, southeast, west and southwest (zoned R-B, AR-III, PUD, V-C, R-II and R-I-A), and by commercially-zoned properties to the southwest, along SR53 (zoned H-B and G-B).

The Proposed Use is consistent with the intent of the Comprehensive Plan and the Future Development Map. The Subject Property is depicted on the Gainesville 2030 Comprehensive Plan, as Mixed-Use General and Low Density Residential (1 to 4 Dwelling Units per Acre). To accomplish this, the Applicant proposes to utilize the PUD and G-B zoning categories.

### **A. Zoning and Land Use**

#### **i. 3.76 acres to be zoned G-B (General Business District)**

If the zoning is approved as submitted, 3.76 acres of the Subject Property would be zoned G-B (General Business District), identified as Tract 3 on the Retracement for Oak Hall Companies, LLC, dated December 30, 2016, last revised March 31, 2017 (the “**Zoning Survey**”), submitted concurrently with this Application and incorporated by reference. This 3.76 acres of the Subject Property is sometimes hereafter referred to as the “G-B Zoning Tract.”

The G-B Zoning Tract would be governed by the general provisions of the UDLC for that zoning category. In this regard, the Applicant proposes to subject the G-B Zoning Tract to the land uses and performance standards depicted on the Zoning Plan, dated March 31, 2017, prepared for Oak Hall Companies, LLC by Site Development Consultants, Inc. (the “**Concept Plan**”), submitted concurrently with this Application and incorporated by reference.

#### **ii. 154.22 acres to be zoned PUD (Planned Unit Development)**

If the zoning application is approved as submitted, 154.22 acres of the Subject Property would be zoned PUD (Planned Unit Development), identified as Tract 1 & 2 on the Zoning Survey. This 154.22 acres of the Subject Property is sometimes hereafter referred to as the “PUD Zoning Tract.”

The Applicant proposes to subject the PUD Zoning Tract to the land uses and performance standards depicted on the Concept Plan. In addition, the Applicant also proposes to subject the PUD Annexation Property to the **PUD Performance Standards**, attached to and incorporated with this Narrative Report for Zoning.

### **B. Traffic Impact Analysis**

The Applicant also submits with this Narrative Report, and incorporates herein, a Trip Generation Report and Traffic Study Network Determination.

Permanent access to the development will be from the ROW Access. All of the development's interior streets and driveways will be publicly-owned and maintained.

Traffic generated from the development will be minimal and the entrance will be at a location where sight distance is sufficient. All curb cuts shall be coordinated and approved by the City of Gainesville and GDOT and acceleration and deceleration lanes will be installed as required. All streets within the development will be constructed to conform to standard requirements. Parking will be provided onsite as required by the ULDC.

#### **C. School System**

As the Annexation Property will be age-restricted use, impact on schools will be minimal.

#### **D. Utilities**

With regard to public utilities, water, sanitary sewer, electricity and cable are available to the site. The development's water and sewer needs will be served by the City of Gainesville. The Applicant will install underground utility lines within the development to serve the project on an as-needed basis.

#### **E. Economic Impact**

The Applicant submits and incorporates herein the attached **Economic Impact Statement**. The calculations therein (a) analyze the impact of the entire 208.79 acre Mixed-Use development and (b) assume the owners of the residential units will have no children and be exempt from School Property Taxes. The number of residents with children will be nominal, and any such persons would likely be required to pay School Property Taxes.

#### **F. Environmental Impact**

The project should also have a minimal impact on the environment. There should be no impact on air quality. Drainage, soil erosion, and sedimentation controls will be extensively utilized on the site after obtaining all required approvals from the Soil Conservation Service and the City of Gainesville. Best management practices will be utilized to protect natural resources. The Applicant will submit plans detailing the development for approval by all applicable and appropriate governmental agencies, based on conformity with subdivision and zoning requirements, as well as other applicable ordinances, statutes and regulations.

## II. Improvement Requirements Comparison

|                   | <u>City Standards</u>                                                                   | <u>Proposed Standards</u>                 |
|-------------------|-----------------------------------------------------------------------------------------|-------------------------------------------|
| ROW Widths        | 50 feet                                                                                 | 50 feet                                   |
| Pavement Widths   | 24 feet                                                                                 | 24 feet                                   |
| Sidewalk Width    | 4 feet                                                                                  | 4 feet                                    |
| Sidewalk Location | At least 1 side of each residential road, with connector sidewalks to commercial areas. | At least 1 side of each residential road. |

## III. Community Benefit Statement

The community will benefit from the Proposed Use, which will provide high quality housing for seniors, improved fire service, and commercial and recreational benefits to the community. The Proposed Use will have little impact on school attendance, as most age-restricted units will not house school-aged children. Residents of age-restricted housing also tend to drive less and, when they do, they drive during off-peak hours, thereby lessening the impact on community traffic.

The Proposed Use will provide quality architectural designs, and extend utility services to areas currently unserved by water and sewer. The Proposed Use will also improve road access on Ahaluna Drive.

## CONCLUSION

Approval of the Application will be in the best interest of the City. The Applicant respectfully requests that the Application, as requested by the Applicant, be approved. The Applicant also reserves the right to amend this statement and the Application by supplementing further responses and documents.

Sincerely,

*Ethan Underwood*

Ethan Underwood,  
 Attorney for the Applicant

# **PUD Performance Standards**

## **I. Residential Performance Standards**

### **RESIDENTIAL USE**

Maximum 790 Age-Restricted, Independent Living, Assisted Living, and Memory Care Dwellings on 185.02 acres zoned PUD with a gross density of approximately 4.43 residential units per acre.

### **AGE RESTRICTION**

No less than 80% of the residential units must be inhabited by at least one person 55 years of age or older.

### **BUILDING MATERIALS**

Exteriors of all homes and residential structures constructed on the subject property must be of brick, stone, hard coat stucco, or a cement-based material such as hardi-board. Accent materials such as, but not limited to, copper roofing, cedar shake, a cement-based material such as hardi-board, or a combination of such materials, may be used with such accent material not to exceed fifty percent (50%) of the facade. There shall be no vinyl or aluminum siding.

The roofing material used on all detached homes must be cedar shake, architectural/dimensional style asphalt shingles or metal as appropriate to the architectural style of each home.

### **PROPERTY OWNER ASSOCIATIONS**

The development shall have covenants that require maintenance of the landscaped entrance area, open space, and amenity areas by a homeowners association. Membership in the homeowners association is mandatory for owners of properties. Zero-Lot Residential Units and Stacked Flat Units may have separate sub-associations to manage their respective properties

### **AMENITIES**

An amenity area, including a swimming pool and club house, will be provided for use of residents and will be the responsibility of the homeowners association to maintain. On-street parking will be allowed for the amenity area.

An approximately 40,000 sf storage facility, with parking spaces initially for up to 19 , with a total of 50 at full build-out, Recreational Vehicles as well as up to 50 parking spaces for on-site boat storage will be available on the premises for lease *solely* to residents of the development.

Residents will also have the ability to utilize community docks and lease or purchase one of the approximately 130 boat slips for the development.

### **UNIT TYPE**

Residential units are designed to allow residents to “age in place.” Independent living products will include single-family detached homes, single-family attached homes, attached condominiums, and rental units. Rental units will also offer assisted living services, and memory care units.

## I. Detached Residential

| Type                             | Maximum # of Units |
|----------------------------------|--------------------|
| • POD A – Single Family Detached | 265 units          |
| • POD B – Single Family Detached | 40 units           |

### PERFORMANCE STANDARDS – DETACHED RESIDENTIAL

- Minimum lot width – 40 feet
- Minimum Heated Floor Area (1,500 sf)
- Maximum building height – 40 feet
- Each unit will have a minimum 2 car enclosed garage
- Each unit will have a minimum of 18 feet of driveway from the back of sidewalk to the building face or 20 feet from the back of the curb to the building when there is no sidewalk
- Setbacks, excluding steps, roof overhangs, chimneys, bay windows, and patios:
  - 15' front
  - 3' side
  - 10' building separation (foundation to foundation)
  - 10' interior rear

## II. Zero-Lot Line Residential

| Type                       | Maximum # of Units |
|----------------------------|--------------------|
| • Single Family Cottages   | 79 units           |
| • Terrace Homes – Detached | 81 units           |

The building footprint for each unit will comprise the boundaries of the individual lots; all other improved areas will be maintained by a mandatory homeowner association as “common area” and all undeveloped area will be maintained as “open space.”

### A. Single Family Cottages.

#### PERFORMANCE STANDARDS – ZERO-LOT LINE RESIDENTIAL

- Minimum unit width – 15 feet
- Minimum Heated Floor Area (500 sf)
- Maximum building height – 30 feet
- Each unit will have a minimum of 18 feet of driveway from the back of sidewalk to the building face or 20 feet from the back of the curb to the building when there is no sidewalk
- Setbacks, excluding steps, roof overhangs, chimneys, bay windows, and patios:
  - 0’ front
  - 0’ side
  - 0’ interior rear
  - 10’ building separation (foundation to foundation)

## B. Terrace Homes – Detached.

### PERFORMANCE STANDARDS – ZERO-LOT LINE RESIDENTIAL

- Minimum unit width – 24 feet
- Minimum Heated Floor Area (1,100 sf)
- Maximum building height – 30 feet
- Each unit will have a minimum 2 car enclosed garage
- Each unit will have a minimum of 18 feet of driveway from the back of sidewalk to the building face or 20 feet from the back of the curb to the building when there is no sidewalk
- Setbacks, excluding steps, roof overhangs, chimneys, bay windows, and patios:
  - 0' front
  - 0' side
  - 0' interior rear
  - 10' building separation (foundation to foundation)

### III. For-Rent Residential

For-Rent Residential units are multi-story apartment, with buildings operated by a professional management company. In all areas designated for For-Rent Residential use, all buildings and grounds will be maintained by a management company and all undeveloped areas will be maintained as “open space.”

| Type                                 | Maximum # of Units                                    |
|--------------------------------------|-------------------------------------------------------|
| • Independent Living – For Rent (IL) | 175 units, less MC units                              |
| • Assisted Living – For Rent (AL)    | 150 units, less MC units                              |
| • Memory Care – For Rent (MC)        | Up to 30 units, which count toward IL and AL maximums |

#### PERFORMANCE STANDARDS – FOR-RENT RESIDENTIAL

- Minimum Heated Floor Area – 700,000 sf
- Maximum building height – 75 feet
- Setbacks, excluding steps, roof overhangs, chimneys, bay windows, and patios:
  - 40’ front
  - 20’ side
  - 25’ interior rear
  - 50’ exterior rear
- Minimum Parking Requirements - 1 space per 1.5 residential unit, plus one space per employee

## **II. Commercial Performance Standards**

### **COMMERCIAL USE**

Commercial Uses within the Planned Unit Development are generally expected to be Retail/Office/Restaurant. In addition, an approximately 40,000 sf storage facility may be constructed within the PUD.

The following uses are not allowed within the commercial portion of the PUD:

- (a) Motels or hotels with rooms accessed from the exterior of the building.
- (b) Adult novelty stores.
- (c) Adult entertainment centers.
- (d) Pawn shops.
- (e) Gas Stations.
- (f) Tire Stores.
- (g) Massage Parlors; provided this will not prohibit the operation of any profession by practitioners licensed by the State of Georgia.
- (h) Vaping stores
- (i) Auto body shops.
- (j) Automobile sales establishments.
- (k) Marine sales or repair stores.
- (l) Non-automated car wash.

### **BUILDING MATERIALS**

Building exteriors not screened from view from a public right-of-way right of way or any property line shall have an architectural treatment of brick, brick/frame, stone, or stucco, or another architectural treatment approved by the Planning Director.

### **MECHANICAL EQUIPMENT**

Ground and building-mounted mechanical equipment, such as coolers, HVAC equipment, meters, utility banks, trash receptacles, and electrical or telephone utility cabinets must be placed within the interior side and rear yards; provided, such mechanical equipment may be located in the front or corner side yards if screened from any right-of-way or any property line with landscape materials.

## PERFORMANCE STANDARDS - COMMERCIAL

- Maximum Building Coverage – 70% of lot
- Maximum building height – 75 feet
- Minimum landscaped open space – 10% of lot
- Minimum front landscape strip paralleling right-of-way – 10 feet
- Minimum side and rear landscape strip – 6 feet
- Setbacks, excluding steps, roof overhangs, chimneys, bay windows, and patios:
  - 40' from right-of-way
  - 10' side
  - 25' interior rear
  - 50' adjacent to residential use
- Minimum Parking Requirements - See Gainesville Unified Land Development Code

## Summary

The Lanier Tract DRI is a primarily senior-age-restricted residential community that will be developed along Ahaluna Drive and Strickland Drive. There will be an office/retail node along GA 53, north of Avonlea Way. A fire station of 10,650 square feet is also proposed to be constructed along GA 53. Vehicular access will be provided at several locations, primarily along Ahaluna Drive, with connections to GA 53 via Strickland Drive, at the median opening at Avonlea Way, and through adjacent outparcels, aligning with Canterbury Road. The office/retail node will have a two right-in / right-out accesses directly on GA 53, with no anticipated internal connection to the balance of the development.

The project will generate 171 new trips in the a.m. peak hour, 251 new trips in the p.m. peak hour, and 3,097 new trips during a 24-hour weekday.

The following recommendations are made at each study intersection:

1. **Sportsman Club Road at Strickland Drive** – No changes are recommended at this intersection for the Existing, No-Build, or Future Phase One and Future Phase Two conditions.
2. **Dawsonville Highway at Sportsman Club Road** – The side street delays at this intersection are significant but the low side street volumes make the intersection a weak candidate for signalization. A northbound exclusive right turn lane should be added on GA 53 at Sportsman Club Road.
3. **Dawsonville Highway at Avonlea Way** – Side street delays are high at the existing eastbound approach of Avonlea Way. The volumes exiting the new Lanier Tract access will be low and many of them will be right turners. Therefore, this intersection is a weak candidate for signalization. A northbound right turn lane on GA 53 should be considered at this access and the site plan includes this lane. The new site access should be constructed with one entering lane and one exiting lane. The side street approach exiting the site should be controlled by side street stop sign and accompanying stop bar.
4. **Dawsonville Highway at Canterbury Road** – Side street delays are high on the existing eastbound approach of Canterbury Road. This intersection is a weak candidates for signalization in the existing, no-build, and Future Phase One conditions. No decel lane will be required for Future Phase One. With the future development of the retail outparcels, by others, a northbound deceleration lane on GA 53 is recommended. This intersection will be a prime candidate for signalization upon development of the outparcels. A signal warrant study should be performed for this intersection according to the standards set forth in the Federal Highway Administration's *Manual On Uniform Traffic Control Devices* (MUTCD). This new access at the Canterbury Road median break should be constructed with at least one entering lane and an exiting shared left/through lane and an exclusive right turn lane. The two westbound lanes are in anticipation of the development of the outparcels. With only the Lanier Tract volumes, only one entering and one exiting lane would be required. Until signalization is warranted, the side street approach exiting the outparcel tracts should be controlled by side street stop sign and accompanying stop bar.

5. **Dawsonville Highway at Ahaluna Drive** – A northbound right turn lane should be added on GA 53 at Ahaluna Drive in the existing condition. The future volumes exiting Ahaluna Drive would benefit from the addition of a second westbound lane, resulting in a shared left/through lane and an exclusive right turn lane on Ahaluna Drive at GA 53. There may be an opportunity to shorten the cycle length, which would reduce time spent by vehicles waiting on the side street.
6. **Dawsonville Highway at North Lake Square Access** – This intersection operates acceptably in all analysis conditions. No mitigation is recommended for any analysis condition.
7. **Dawsonville Highway at Beachwood Boulevard** – No changes are recommended at this intersection based on this study.
8. **Dawsonville Highway at McEver Road** – The existing southbound right turn volume is sufficiently-high (828 a.m., 481 p.m.) to merit consideration of the addition of a second exclusive right turn lane and/or the addition of a protected right turn overlap phase. There may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.
9. **Dawsonville Highway at Green Hill Circle** – This signalized intersection incurs high sides street delays, again, due to the allocation of the majority of greentime to the Dawsonville Highway approaches. There may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.
10. **Dawsonville Highway at Shallowford Road** – The lane configuration and signal phasing are appropriate for this intersection. Reduction of the cycle length and optimization of the allocation of greentime could reduce delays and queuing at this intersection.

## Introduction

This study assesses the traffic impact of a proposed multi-use Development of Regional Impact (DRI) in the City of Gainesville, Georgia. The site is located along the east side of Dawsonville Highway (Georgia State Route 53), and the east and west sides of Ahaluna Drive, as shown in the location map in Figure 1. The project will include a mix of senior living facilities, including senior-age-restricted single family homes, cottages, terrace homes, independent living apartments, and assisted living. In addition, the project will include a retail and office tract. This impact study includes the adjacent Willow Springs townhome development, to the north, and seven retail outparcels to be developed by others, located along the east side of GA 53.

The purpose of this traffic impact study is to determine existing traffic operating conditions in the vicinity of the proposed development, project future “no-build” and “build” traffic volumes, assess the impact of the subject development, then develop conclusions and recommendations to mitigate the project traffic impact and ensure safe and efficient existing and future traffic conditions in the vicinity of the project.

**Figure 1 – Lanier Tract Location Map**

## Existing Traffic Conditions

Existing traffic operating conditions in the vicinity of the proposed Lanier Tract development were assessed. The following is a description of existing facilities, volumes, and intersection operations.

### Description of Roadway Facilities

Georgia State Route 53 (Dawsonville Highway adjacent to the site) is a northwest to southeast principal arterial that extends from northwest Georgia, crosses US 19 and Lake Lanier, then passes the subject site and continues to the southeast. The State Route 53 designation turns to the southwest and continues along McEver Road to Mundy Mill Road, then follows Mundy Mill Road through its interchange with Interstate 985, and continues to the southeast. Adjacent to the subject development, GA 53 has two through travel lanes in each direction, is divided with a grassed median, and has exclusive turn lanes at major intersections. The terrain along this section of GA 53 is gently rolling and the posted speed limit is 45 mph.

Ahaluna Drive is a two lane rural local roadway that begins at a signalized intersection at GA 53 and winds through undeveloped land and low density residential development, to its terminus near the shore of Lake Lanier. The road is gently winding with rolling terrain. The proposed Lanier Tract development will develop some of the land on both sides of Ahaluna Drive, and the signal at GA 53 will provide one of the primary access points for this development to the roadway system.

Strickland Drive and Sportsman Club Road are two-lane residential streets that will provide access for the northern part of the proposed Lanier Tract DRI to GA 53. Strickland Drive is side street stop sign controlled at Sportsman Club Road and Sportsman Club Road is side street stop sign controlled at a median break on GA 53. Both roads are gently winding with gently rolling terrain and Strickland Drive becomes unpaved at its eastern terminus. The intersection of Sportsman Club Road at Strickland Drive is located in very close proximity to the intersection of Sportsman Club Road and Old Dawsonville Highway. However, lines of sight between the two intersections are clear and the volumes at these two locations are very low.

The following are photographs of intersections and roadways in the study area.

### Existing Traffic Volumes

The City of Gainesville's Unified Land Development Code (ULDC) specifies that the study area to be included in a traffic impact study will be determined by calculating the peak hour and daily trips that the project will generate, then applying the table provided in the code, shown as Table 1, below, to determine the distance from the project that must be included in the study area.

**Table 1 – ULDC Study Area Size Requirements**

| Peak Hour Trips Generated | Daily Trips Generated | Distance from Perimeter of Proposed Development Along Roads |
|---------------------------|-----------------------|-------------------------------------------------------------|
| 100 - 150                 | 1,000 – 1,500         | ½ mile                                                      |
| 151 - 500                 | 1,501 – 5,000         | 1 mile                                                      |
| 501 – 1,000               | 5,001 – 10,000        | 2 miles                                                     |
| 1001 or more              | 10,001 or more        | 3 miles                                                     |

from the City of Gainesville ULDC

The trip generation for the proposed development is presented later in this report, summarized in Table 6. The peak hour trip generation for the project was calculated at 251 trips and the 24-hour volume is 3,097 trips. Based on these numbers, applied to the ULDC standard presented above, the study network was determined to

extend for one mile from the limits of the proposed site. The one mile limits were presented to the City and, based on that information, the intersections to be included in this study were agreed upon with the City as follows:

1. Sportsman Club Road at Strickland Drive
2. Dawsonville Highway at Sportsman Club Road
3. Dawsonville Highway at Avonlea Way
4. Dawsonville Highway at Canterbury Road
5. Dawsonville Highway at Ahaluna Drive
6. Dawsonville Highway at North Lake Square Shopping Center Entrance
7. Dawsonville Highway at Beachwood Boulevard
8. Dawsonville Highway at McEver Road
9. Dawsonville Highway at Green Hill Circle
10. Dawsonville Highway at Shallowford Road

Existing full turning movement traffic volume counts were collected at each of these intersections. The counts at most intersections were collected on Thursday, November 17, 2016, from 7:00 a.m. to 9:00 a.m. and from 4:30 p.m. to 6:30 p.m. The counts at the North Lake Square entrance were collected on Wednesday, March 22, 2017. Area schools were in standard session on the dates of the traffic counts. From the count data, the highest four consecutive 15-minute interval volumes at each intersection, during each time period, were determined. These volumes make up the typical weekday a.m. and p.m. peak hour traffic volumes at that intersection. The existing a.m. and p.m. peak hour turning movement volumes are shown in Figure 2. The intersection raw count data is found in Appendix A. It is noted that these existing volumes were compared with the volumes in the Preliminary Timing Report, SR 53 Connector – SR 60, Hall County, Georgia, dated April 2016, as provided by the City of Gainesville's traffic consultant. The magnitude of the side street volumes were found to be very comparable with the counts performed for this current study, and generally slightly higher. However, the volumes on the major streets were consistently notably higher for this current study.

Historic Georgia DOT 24-hour traffic counts were also collected in the vicinity. These counts are summarized in Table 3 in the No-Build Conditions section of this report. The 2015 (the latest year for which Georgia DOT data is available) Georgia DOT Average Annual Daily Traffic (AADT) volume on SR 53 north of Sportsman Club Road was 25,600 vehicles per day (vpd).

## Existing Intersection Operations

Existing traffic operations were analyzed at the counted intersections using Synchro software, version 8, in accordance with the methodology presented in the Transportation Research Board's 2010 *Highway Capacity Manual (HCM 2010)*. The *HCM 2010* methodology is presented in Appendix B. The results of the analysis are shown in Table 2. Computer printouts containing detailed results of the analysis are located in Appendix C.

**Table 2 – Existing Intersection Operations**

| Intersection / Approach                       | A.M. Peak Hour |              | P.M. Peak Hour |              |
|-----------------------------------------------|----------------|--------------|----------------|--------------|
|                                               | LOS            | Delay s/veh  | LOS            | Delay s/veh  |

| westbound approach                          | D | 49.9 | E        | 78.0         |

The analysis of the existing conditions reveals generally acceptable traffic operations at the study intersections. However, Dawsonville Highway, McEver Road, and Shallowford Road carry significant through traffic. At unsignalized intersections, the heavy major roadway volumes contribute to high side street delays. At signalized intersections, the side street delays are also high, even at locations with moderate side street volumes, due to the heavy greentime demands placed on the signals by the major street volumes. The existing conditions at each intersection are discussed briefly as follows:

1. **Sportsman Club Road at Strickland Drive** – Operations at this intersection are excellent due to extremely low volumes. This intersection is located very close to the stop sign controlled intersection of Sportsman Club Road at Old Dawsonville Highway. However, the volumes at that intersection are extremely low, also, and the lines of sight between the two intersections are clear. Therefore, no changes are recommended at this intersection for the existing condition.
2. **Dawsonville Highway at Sportsman Club Road** – The overall operations at this intersection are good, but the Sportsman Club Road southbound approach operates with high delays. This is not unusual for side street stop sign controlled approaches at major thoroughfares such as GA 53, and the volumes incurring the high delays are low. The only way to achieve side street delays better than LOS F is to signalize this intersection. However, signalization would introduce new delays to GA 53 and could also increase the potential for rear-end collisions on GA 53. Signalization would require satisfaction of applicable warrants, as proscribed in the Federal Highway Administration's *Manual On Uniform Traffic Control Devices* (MUTCD). While a warrant analysis was not performed as part of this traffic impact study, the low side street volumes make this intersection a weak candidate for signalization in the existing condition. A review of Georgia DOT auxiliary lane standards is provided later in this report, which concludes that a northwest-bound exclusive right turn lane is likely to be justified, based on existing volumes, on GA 53 at Sportsman Club Road.
3. **Dawsonville Highway at Avonlea Way, 4. Dawsonville Highway at Canterbury Road, and 7. Dawsonville Highway at Beachwood Boulevard** – The operations at these three unsignalized intersections are comparable with one another, with the GA 53 approaches operating well, moderate delays for the side

street right turn movements, and high delays for the side street left turn movements. These side street left turn delays are high for the same explanation just provided for Sportsman Club Road. As with that intersection, signalization would be required at these three intersections, in order to reduce the side street left turn delays to better than LOS F. At all three of these intersections, the side street approach volumes are predominately right turners, with extremely low left turn volumes. For this reason, these three intersections are considered unlikely candidates for signalization in the existing condition. No signal warrant analyses were performed at these intersections as part of this traffic study.

5. **Dawsonville Highway at Ahaluna Drive** – While this intersection is signalized, the greentime on the signal heavily favors the GA 53 approaches. This is appropriate given the volume disparity between the GA 53 approaches and the significantly-lower-volume side street approaches. This results in high side street delays, particularly on the westbound approach exiting Ahaluna Drive. A second westbound lane, striped as an exclusive right turn lane, would allow the signal to process more side street traffic with its limited greentime allocation. In addition, this second lane would allow for more right-turns-on-red which are currently trapped behind left and through trips. The addition of this right turn lane would require relocation of the steel strain pole for the signal, a drainage structure, and possibly a large brick monument sign, which could reduce the feasibility of adding this lane. Field observations suggest that there may be an opportunity to shorten the cycle length, which would reduce time spent by vehicles waiting for the side street green signal. A review of Georgia DOT auxiliary lane standards is provided later in this report, which concludes that a northbound exclusive right turn lane should be constructed on GA 53 at Ahaluna Drive in the existing condition. The addition of the second westbound lane on Ahaluna Drive and the northbound exclusive right turn lane on GA 53 will improve operations, but the Ahaluna Drive approach will still operate at LOS F in the a.m. peak hour due to the long cycle length with the greentime heavily favoring GA 53.
6. **Dawsonville Highway at North Lake Square Access** – This intersection operates well in both peak time periods. In the a.m., the side street approach volumes are extremely low, attributed to most or all of the retail on the side street approaches being closed for business at that time. The side street volumes increase notably in the p.m. Side street approach delays are fairly high, though still within acceptable limits. This is attributed to the allocation of the majority of greentime on the signal to the Dawsonville Highway approaches, resulting in long waits on the side streets, even when volumes are low.
8. **Dawsonville Highway at McEver Road** – This is the major intersection in the area, where the route of GA 53 turns from Dawsonville Highway to McEver Road. The lane configuration and signal phasing at this intersection are generally appropriate. The southbound right turn volume is sufficiently-high (828 a.m., 481 p.m.) to merit consideration of the addition of a second exclusive right turn lane and/or the addition of a protected right turn overlap phase. The overlap phase would provide a protected right turn arrow that would operate concurrently with the westbound left turn protected phase on the McEver Road approach. This would replace the red ball indication for that movement which would increase capacity by not requiring each right turner to stop. However, even with these improvements, the intersection will still operate at LOS F in the p.m. peak hour. Finally, there may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.

9. **Dawsonville Highway at Green Hill Circle** – This signalized intersection generally operates acceptably, but does incur some side-street delays, again, due to the allocation of the majority of greentime to the Dawsonville Highway approaches. There may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.
10. **Dawsonville Highway at Shallowford Road** – The lane configuration and signal phasing are appropriate for this intersection. Reduction of the cycle length and optimization of the allocation of greentime could reduce delays and queuing at this intersection.

## Future No-Build Traffic Conditions

A future no-build condition was developed. This represents the traffic conditions that will exist in the future at the date of the full build-out of the proposed Lanier DRI, but not including the Lanier DRI trips. The purpose of the no-build analysis is to isolate the traffic impacts of the proposed development from other growth and development that is expected to occur in the area while the Lanier DRI is under construction.

The no-build condition consists of the counted traffic volumes, increased by a general background growth factor. In order to develop the background growth factor, historic Georgia DOT 24-hour traffic counts were collected in the vicinity of the Lanier DRI. These counts were performed from 2011 through 2015 (the latest year for which Georgia DOT data is available) and, according to the Georgia DOT, the counts were adjusted for a variety of factors, including season, in order to arrive at the Average Annual Daily Traffic (AADT) volume. The Georgia DOT AADT counts are summarized in Table 3.

**Table 3 – Georgia DOT Daily Traffic Volume Counts**

| Year              | SR 53<br>N of<br>Sportsman | Annual<br>Growth | McEver<br>W of<br>SR 53 | Annual<br>Growth | Dawsonville<br>S of<br>Shallowford | Annual<br>Growth | Shallowford<br>S of<br>Dawsonville | Annual<br>Growth |
|-------------------|----------------------------|------------------|-------------------------|------------------|------------------------------------|------------------|------------------------------------|------------------|
| <b>Station ID</b> | <b>1390269</b>             |                  | <b>1390274</b>          |                  | <b>1390258</b>                     |                  | <b>1390647</b>                     |                  |
| 2011              | 23,830                     | na               | 21,520                  | na               | 25,950                             | na               | 8,280                              | na               |
| 2012              | 23,520                     | -1.3%            | 21,150                  | -1.7%            | 25,610                             | -1.3%            | 8,140                              | -1.7%            |
| 2013              | 22,730                     | -3.4%            | 20,890                  | -1.2%            | 25,520                             | -0.4%            | 8,090                              | -0.6%            |
| 2014              | 22,700                     | -0.1%            | 20,900                  | 0.0%             | 25,500                             | -0.1%            | 13,300                             | 64.4%            |
| 2015              | 25,600                     | 12.8%            | 21,600                  | 3.3%             | 26,300                             | 3.1%             | 13,700                             | 3.0%             |
| Annual<br>Average |                            | 1.8%             |                         | 0.1%             |                                    | 0.3%             |                                    | 13.4%            |

The annual growth trend has fluctuated from year to year, with generally negative growth during the first few count years, then strong growth in the most recent years. The average annual growth on GA 53 closest to the site has been 1.8%. A modest 2% annual growth factor was applied to the counted volumes when projecting the future no-build volumes. The growth was applied for five years, for a total of 10.4% growth, that will occur while the Lanier Tract DRI is under construction.

The existing, counted traffic volumes were increased by the 10.4% growth factor. The results are the no-build condition traffic volumes that will be on the roadway network in the future when the Lanier Tract DRI is completed, but excluding the Lanier Tract DRI trips. These no-build volumes are shown in Figure 3.

### Figure 3 – Future No-Build Traffic Volumes

## Future No-Build Intersection Operations

No-build traffic operations were analyzed at the counted intersections using Synchro software, version 8, in accordance with the methodology presented in the Transportation Research Board's 2010 *Highway Capacity Manual (HCM 2010)*. The *HCM 2010* methodology is presented in Appendix B. The results of the analysis are shown in Table 4. Computer printouts containing detailed results of the analysis are located in Appendix D.

**Table 4 – Future No-Build Intersection Operations**

| Intersection / Approach                       | A.M. Peak Hour |              | P.M. Peak Hour |                |
|-----------------------------------------------|----------------|--------------|----------------|----------------|

The analysis of the no-build condition reveals increases in delays at each of the study intersections, as would be expected. The no-build analysis did not include any of the potential mitigation discussed in the existing analysis. The no-build condition at each intersection is discussed briefly as follows:

- 1. Sportsman Club Road at Strickland Drive** – Operations at this intersection will continue to be excellent in the no-build condition. Therefore, no changes are recommended at this intersection for the no-build condition.
- 2. Dawsonville Highway at Sportsman Club Road** – The side street delays will become very high in the no-build condition. However, the volumes incurring these delays will remain modest and it is considered unlikely that this intersection would be a good candidate for signalization.
- 3. Dawsonville Highway at Avonlea Way, 4. Dawsonville Highway at Canterbury Road, and 7. Dawsonville Highway at Beachwood Boulevard** – The no-build operations at these three unsignalized intersections will be comparable to the existing condition, with the GA 53 approaches operating well, moderate delays for the side street right turn movements, and high delays for the side street left turn movements. As with the existing condition, at all three of these intersections, the side street volumes are predominately right turners, with extremely low left turn volumes. For this reason, these three intersections are expected to be unlikely candidates for signalization in the no-build condition.
- 5. Dawsonville Highway at Ahaluna Drive** – The Ahaluna Drive approach will continue to operate at LOS F and the delays will increase. The mitigation discussed in the existing condition is still applicable.
- 6. Dawsonville Highway at North Lake Square Access** – This intersection will operate comparably in the no-build condition, as in the existing condition. No mitigation is identified for this intersection in the no-build condition.
- 8. Dawsonville Highway at McEver Road** – Operations will continue to be congested at this intersection. The mitigation discussed in the existing condition is still applicable.

9. **Dawsonville Highway at Green Hill Circle** – Delays will increase from the existing to no-build conditions. A.M. peak operations will continue to be acceptable, while the p.m. peak will teeter between LOS E and LOS F. No new mitigation is identified for the no-build condition.
10. **Dawsonville Highway at Shallowford Road** – As with the other intersections, no new mitigation is identified for the no-build condition. Delays will increase from the existing condition, but will generally remain acceptable in the a.m. and at the LOS E to LOS F threshold in the p.m.

## Lanier Tract Traffic Characteristics

This section describes the anticipated traffic characteristics of the proposed Lanier Tract development, including a site description, how much traffic the project will generate, and where that traffic will travel.

### Project Description

The Lanier Tract DRI is a primarily senior-age-restricted residential community that will be developed generally along Ahaluna Drive and Strickland Drive. There will be an office/retail node along GA 53, north of Avonlea Way. A fire station of 10,650 square feet is also proposed to be constructed along GA 53 in conjunction with this development. Vehicular access will be provided at several locations, primarily along Ahaluna Drive, with connections to GA 53 via Strickland Drive, at the median opening at Avonlea Way, and through adjacent outparcels (which will be discussed in the Future Phase Two section of this report), aligning with Canterbury Road. The office/retail node will have a two right-in / right-out accesses directly on GA 53, with no anticipated internal connection to the balance of the development. The site plan is presented in Figure 4.

### Trip Generation

The volume of traffic that will be generated by the proposed Lanier Tract DRI was calculated using the equations and rates in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9<sup>th</sup> Edition. The trip generation for all of the detached homes was calculated using ITE Land Use 251 – Senior Adult Housing – Detached. The trips for the independent living units were calculated using ITE Land Use 253 – Congregate Care Facility. The trips for the assisted living facility were determined using ITE Land Use – 254 – Assisted Living. The storage facility trips were calculated using ITE Land Use 151 – Mini-Warehouse. The office / retail trip generation was calculated by dividing the total square footage of that commercial node in half and applying ITE Land Use 820 – Shopping Center to half of the square footage and ITE Land Use 750 – Office Park to the other half.

No multi-use adjustment was applied to the raw trip generation to account for the mixed-use nature of the project, because the office/retail node is not connected internally with the balance of the project. The retail trip generation was adjusted to account for pass-by trips. Pass-by trips are trips to the retail that are currently driving on GA 53 and which will turn into the site for shopping purposes then continue on the trip they are already making. The ITE *Trip Generation Manual* provides an average p.m. peak hour pass-by percentage of 38% for the shopping center land use. However, the plan for this development, with the retail mixed with office, suggests that this retail may be highly destination-oriented. To be conservative, a 25% pass-by adjustment was made for the p.m. peak hour trips, while a 15% adjustment was applied to the a.m. peak hour and 24-hour volumes.

The fire station will be located on the GA 53 adjacent to the project and will serve not just this project, but also the surrounding community. The trips that will be generated by the fire station are expected to be very low. Therefore, the trip generation of the fire station was excluded from this calculation.

The trip generation calculations are shown in Table 5.

Figure 4 – Lanier Tract Site Plan

**Table 5 – Lanier Tract Trip Generation**

| Land Use                               | ITE Code | Size                   | A.M. Peak Hour |           |           | P.M. Peak Hour |           |            | 24-Hour    |
|----------------------------------------|----------|------------------------|----------------|-----------|-----------|----------------|-----------|------------|------------|

| Total Project New Trips                |          |                        | 82             | 89        | 171       | 130            | 121       | 251        | 3,097      |

Notes: The detached homes trip calculations employed ITE average rates due to numbers of units generally much smaller than average sizes in the ITE data. The office and retail calculations were based on ITE average rates due to square footages much smaller than average sizes in the ITE data.

### Willow Springs Townhomes

A small development of 90 senior-age-restricted townhomes is anticipated to be developed concurrently with the Lanier Tract DRI, along Karen Lane (shown in the site plan in Figure 4 at the northern end of the site, bordered in red). The trips for this development were calculated using ITE Land Use 252 – Senior Adult Housing – Attached. The Willow Springs trips are shown in Table 6.

**Table 6 – Willow Springs Townhomes Trip Generation**

| Land Use                        | ITE Code | Size | A.M. Peak Hour |     |       | P.M. Peak Hour |     |       | 24-Hour |
|---------------------------------|----------|------|----------------|-----|-------|----------------|-----|-------|---------|
|                                 |          |      | In             | Out | Total | In             | Out | Total | 2-Way   |
| Senior Adult Housing - Attached | 252      | 90   | 6              | 12  | 18    | 12             | 11  | 23    | 290     |

## Trip Distribution and Assignment

The trip distribution percentages indicate what proportion of the project's trips will travel to and from various directions. The new trips were distributed based on the locations and proximity of likely trip origins and destinations for each land use. The residential trips, including the Willow Springs Townhomes, were distributed based on the locations of urban centers and retail nodes, while the office and retail trips were distributed based on population densities. The new project trips, shown in Table 5, were assigned to the roadway network based on these distribution percentages. Pass-by trips were assigned, where appropriate, based on existing traffic flows passing the site. The new trip distribution percentages for each land use, and the total peak hour trips expected to be generated by the site, are shown in Figure 5. The Willow Springs trips, shown in Table 6, were distributed to the study intersections using the same distribution as the Lanier Tract residential trips. These trips are not included in the site generated trips shown in Figure 5, but they are included in the future analysis. Appendix A contains intersection volume worksheets that show the specific Willow Springs trips (as well as all other Lanier Tract residential, office, and retail trips) for each movement at each intersection.

Figure 5 – New Trip Distribution Percentages and Total Lanier Tract Trips

## Future Phase One Traffic Conditions

This section describes the anticipated future traffic conditions after the Lanier Tract DRI is fully constructed and operational.

### Future Phase One Traffic Volumes

The trips from the Lanier Tract DRI (and Willow Springs) were added to the future no-build volumes (comprised of the counted volumes increased by 10.4%, as described previously). The resulting volumes are the traffic volumes that will be at each intersection when the Lanier Tract is fully operational. A strip of land between the Lanier Tract and the east side of GA 53 is anticipated to be developed by others with retail outparcels at some future date. The impact of this outparcel development is evaluated in the Future Phase Two analysis, discussed later in this report. However, as part of the Lanier Tract development, a roadway will be constructed through that strip of land, to connect the Lanier Tract to GA 53 at the existing median break at Canterbury Road. The Future Phase One volumes and analysis include this connection. The Future Phase One traffic volume projections are shown in Figure 6. These volumes are also shown in the intersection volume worksheets in Appendix A.

Figure 6 – Future Phase One Peak Hour Traffic Volume Projections

## Future Phase One Intersection Operations

An operational analysis was performed for the Future Phase One conditions. Table 7 presents the results of this analysis. Computer printouts containing detailed results of the analysis are located in Appendix E.

**Table 7 – Future Phase One Intersection Operations**

| Intersection / Approach                       | A.M. Peak Hour |                | P.M. Peak Hour |                |

A note is made here about the high delays accompanying some of the LOS F. As delays increase, the model's average delay per vehicle projections exceed model capabilities and the results become unrealistic. For example, it is highly improbable that the eastbound left turn from Canterbury Road will incur an average delay of 1,504.7 seconds, or 25 minutes, per vehicle. These high delay numbers are reported to provide an indication of the severity of the LOS F, and were reviewed with engineering judgment when developing conclusions and recommendations.

The operational analysis of Future Phase One conditions reveals some increases in delays from the no-build condition. The most notable changes are increases in the side street delays at both unsignalized and signalized intersections. The Lanier Tract DRI generally contributes a small proportion to the increases in volumes between the existing condition and the Future Phase One, while the background growth contributes a significant proportion of the increases. At most intersections, aside from the site access points along GA 53, the Lanier Tract DRI will contribute primarily to the major roadway through movements. The project's most significant impact will occur at four locations – Sportsman Club Road at GA 53, Avonlea Way at GA 53, Canterbury Road at GA 53, and Ahaluna Drive at GA 53, with the greatest impact being at Ahaluna Drive. The Future Phase One condition at each intersection is discussed briefly as follows:

1. **Sportsman Club Road at Strickland Drive** – Operations at this intersection are will continue to be excellent in the no-build condition. Therefore, no changes are recommended at this intersection for the Future Phase One condition.
2. **Dawsonville Highway at Sportsman Club Road** – The side street delays will continue to be very high in the future. However, the volumes incurring these delays will remain modest and it is considered unlikely that this intersection would be a good candidate for signalization, even in the Future Phase One condition.

3. **Dawsonville Highway at Avonlea Way** – The Lanier Tract DRI will replace the existing private driveway at this location, with a main access to the project. The alignment with the median break will allow full movement operations at this site access. However, it is anticipated that volumes using this access will be modest for a few reasons. First, most of the site trips will be oriented to and from the south on GA 53. Therefore, the propensity of most trips will be to travel along Ahaluna Drive to the signal at GA 53, rather than to turn in and out of the unsignalized access across from Avonlea Way. Some trips traveling to and from the north will use this access and some will use the connection through the site to Strickland Drive. For these reasons, the volumes exiting the site at this location will be low, and will include more right turners than left turners. On the existing eastbound approach of Avonlea Way, the right turn volumes are also notably higher than the left turners. This is an indication that this intersection is unlikely to meet warrants for signalization in the future. No signal warrant analysis was performed at this intersection as part of this study. A right turn lane analysis (presented later) was performed for the northbound direction of GA 53 at the site access at Avonlea Way. The analysis indicates that it is likely that a right turn lane will be justified at this location in the Future Phase One condition and the site plan includes this lane.
4. **Dawsonville Highway at Canterbury Road** – As with the Avonlea intersection, the volumes entering and exiting the Lanier Tract at Canterbury will be very low. The circuitous road configuration through the adjacent future retail tracts will further discourage use of this access. Therefore, for Future Phase One, this intersection is considered unlikely to meet signal warrants. No signal warrant analysis was performed at this intersection as part of this study. A right turn lane analysis (presented later) was performed for the northbound direction of GA 53 at the site access at Canterbury Road. The analysis indicates that it is *not* likely that a right turn lane will be justified at this location in the Future Phase One condition.
5. **Dawsonville Highway at Ahaluna Drive** – The Ahaluna Drive approach will continue to operate at LOS F and the delays will increase. The mitigation discussed in the existing condition is still applicable, including the addition of a northbound right turn lane on GA 53 and a second westbound lane on Ahaluna Drive.
6. **Dawsonville Highway at North Lake Square Access** – This intersection will operate comparably in the future as in the existing and no-build conditions. No mitigation is identified for this intersection in the Future Phase One condition.
7. **Dawsonville Highway at Beachwood Boulevard** – The operations at this unsignalized intersections will continue comparable to the existing and no-build conditions, with the GA 53 approaches operating well, moderate delays for the side street right turn movement, and high delays for the side street left turn movement. The side street volumes will continue to be predominately right turners, with extremely low left turn volumes. For this reason, this intersection is considered unlikely to meet warrants for signalization in the future.
8. **Dawsonville Highway at McEver Road** – Operations will continue to be congested at this intersection, with the overall intersection operating at LOS F in the p.m., and several approaches operating at LOS F in the a.m. and/or p.m. The mitigation discussed in the existing condition is still applicable. This intersection is built-out and the mitigation discussed in the existing analysis includes the addition of a second

southbound right turn lane. Short of widening GA 53 with additional through lanes, or reducing volumes at this intersection, there are not many additional options to mitigate the high delays.

9. **Dawsonville Highway at Green Hill Circle** – Delays will increase from the no-build condition to the future. A.M. peak operations will continue to be acceptable, while the p.m. peak will teeter between LOS E and LOS F. No new mitigation is identified for the Future Phase One condition.
10. **Dawsonville Highway at Shallowford Road** – Delays will increase from the no-build condition, but will generally remain acceptable in the a.m. and at the LOS E to LOS F threshold in the p.m. No new mitigation is identified for the Future Phase One condition.

## Future Phase Two Traffic Conditions

A strip of land along the east side of GA 53, west of the Lanier Tract, is anticipated to be developed by others at some future date. A Future Phase Two condition was developed to assess the traffic operations after this land is developed.

The land is anticipated to be developed as seven outparcels, with 8,000 square feet of retail shopping on each, for a total of 56,000 square feet of retail shopping. The trip generation of the outparcels is presented in Table 8.

**Table 8 – Outparcel Trip Generation**

| Land Use              | ITE Code | Size                   | A.M. Peak Hour |            |            | P.M. Peak Hour |            |             | 24-Hour       |
|-----------------------|----------|------------------------|----------------|------------|------------|----------------|------------|-------------|---------------|
|                       |          |                        | In             | Out        | Total      | In             | Out        | Total       | 2-Way         |
| Outparcel Total Trips | 820      | 56,000 ft <sup>2</sup> | 68             | 41         | 109        | 195            | 211        | 406         | 4,658         |
| -pass-by              |          | 30/40/30%              | <u>-20</u>     | <u>-12</u> | <u>-32</u> | <u>-78</u>     | <u>-84</u> | <u>-162</u> | <u>-1,398</u> |
| Outparcel New Trips   |          |                        | 48             | 29         | 77         | 117            | 127        | 244         | 3,260         |

The outparcels will be served by a full movement access that will align with the existing median break on GA 53 at Canterbury Road. A connecting roadway will run through the outparcel property and connect to the main roadway through the western portion of the Lanier Tract (connecting Strickland Drive to Ahaluna Drive). The connecting roadway through the outparcel property was assumed to be constructed during the development of the Lanier Tract, and was included in the Future Phase One analysis, as discussed previously. This will allow trips from the proposed Lanier Tract to access GA 53.

The trips that will be generated by the outparcels were distributed to the study intersections using the same trip distribution percentages developed for the retail portion of the Lanier Tract DRI (with one minor difference – five percent of the outparcel trips were distributed back into the Lanier Tract, in anticipation of the trips that will travel between the outparcels and the Lanier Tract DRI. This five percent was subtracted from the south, to and from McEver Road). The Lanier Tract distribution percentages were shown previously in this report, in Figure 5.

## Future Phase Two Traffic Volumes

The trips from the outparcels were added to the Future Phase One volumes (comprised of the counted volumes increased by 10.4%, plus the Lanier Tract and Willow Springs trips, as described previously). The resulting volumes are the traffic volumes that will be at each intersection when the outparcels are developed and operational. The Future Phase Two traffic volume projections are shown in Figure 7. These volumes are also shown in the intersection volume worksheets in Appendix A.

## Future Phase Two Intersection Operations

An operational analysis was performed for the Future Phase Two conditions. Table 9 presents the results of this analysis. Computer printouts containing detailed results of the analysis are located in Appendix E.

**Table 9 – Future Phase Two Intersection Operations**

| Intersection / Approach                       | A.M. Peak Hour |                | P.M. Peak Hour |                 |
|-----------------------------------------------|----------------|----------------|----------------|-----------------|
|                                               | LOS            | Delay s/veh    | LOS            | Delay s/veh     |
| 1. Sportsman Club Road at Strickland Drive    | A              | 4.2            | A              | 3.2             |
| southbound left turn                          | A              | 0.0            | A              | 0.0             |

The outparcels' trips will generally be added to the major through movements at each study intersection, and will increase overall intersection delays at each location. The most significant impact of the outparcels will be incurred at the Canterbury intersection, which will serve as the primary access point to GA 53 for all of the outparcels. The operational analysis at this intersection shows that the overall intersection will deteriorate to LOS F in the p.m. and the side street left turns will experience extremely high delays. Because many of the new side street trips exiting the outparcels will be left turners, this intersection becomes a more likely candidate for signalization in the Future Phase Two condition. It is recommended that a signal warrant analysis be performed for this location in the future when the outparcels are planned to be developed. The Georgia DOT right turn lane analysis provided in the next section of this report indicates that a northbound right turn lane on GA 53 at this site access will be necessary in the Future Phase Two condition, when the outparcels are developed and operational.

## Georgia DOT Auxiliary Turn Lane Standards

The four primary site connection points to GA 53 will occur at Sportsman Club Road, across from Avonlea Way, across from Canterbury Road, and via Ahaluna Drive. All four locations are served by existing median breaks and southbound exclusive left turn lanes are already provided, which will serve the site entering left turn traffic, at each location. However, there are no northbound exclusive right turn lanes, which would serve site entering right turn traffic, at any of these locations. The standards proscribed in the Georgia DOT's *Regulations for Driveway and Encroachment Control* (Driveway Manual), revision 4.0, dated 3/15/2016, were reviewed for the requirements for right turn lanes. Table 10, below, is Table 4-6 from the Driveway Manual, and proscribes the right turn volume thresholds at which exclusive right turn lanes must be provided.

**Table 10 – Georgia DOT Minimum Volume Requirements for Right Turn Lanes**

| Posted Speed   | 2 Lane Routes |               | More than 2 Lanes on Main Road |               |
|----------------|---------------|---------------|--------------------------------|---------------|
|                | AADT          |               | AADT                           |               |
|                | < 6000        | >=6000        | <10000                         | >=10000       |
| 35 MPH or Less | 200 RTV a day | 100 RTV a day | 200 RTV a day                  | 100 RTV a day |
| 40 to 50 MPH   | 150 RTV a day | 75 RTV a day  | 150 RTV a day                  | 75 RTV a day  |
| 55 to 60 MPH   | 100 RTV a day | 50 RTV a day  | 100 RTV a day                  | 50 RTV a day  |
| >= 65 MPH      | Always        | Always        | Always                         | Always        |

**Table 4-6 Minimum Volumes Requiring Right Turn Lanes**

The AADT on GA 53 near Sportsman Club Road was identified previously in Table 2 in this report as 25,600 vpd in 2015, and the posted speed limit is 45 mph. For main roads with these conditions, a right turn lane must be provided when the right turn volume exceeds 75 right turn vehicles (RTV) per day. This study calculated a.m. and p.m. peak hour right turn volumes. As a general rule of thumb, p.m. peak hour volumes are typically about 10% of 24-hour volumes. However, field observations suggest that the off-peak activity turning into and out of these intersections currently is very low, so it is uncertain if the 10% rule of thumb is applicable. Using the a.m. and p.m. volume projections, and the 10% rule of thumb to estimate 24-hour RTVs, the existing, no-build, Future Phase One, and Future Phase Two volumes were tested against the Georgia DOT right turn lane standard at the four primary site access locations on GA 53. This analysis is summarized in Table 11.

**Table 11 – Georgia DOT Right Turn Lane Standards for Northbound GA 53**

| Intersection<br>GA 53 at: | 24-Hour<br>RTV<br>Threshold | Existing |      |       | No-Build |      |       | Future Phase One |      |       | Future Phase Two |      |       |
|---------------------------|-----------------------------|----------|------|-------|----------|------|-------|------------------|------|-------|------------------|------|-------|
|                           |                             | a.m.     | p.m. | 24-hr | a.m.     | p.m. | 24-hr | a.m.             | p.m. | 24-hr | a.m.             | p.m. | 24-hr |
| Sportsman                 | 75                          | 8        | 19   | 190   | 9        | 21   | 210   | 15               | 34   | 340   | 15               | 34   | 340   |
| Avonlea                   | 75                          | 0        | 0    | 0     | 0        | 0    | 0     | 2                | 17   | 170   | 2                | 17   | 170   |
| Canterbury                | 75                          | 0        | 0    | 0     | 0        | 0    | 0     | 3                | 4    | 40    | 40               | 128  | 1,280 |
| Ahaluna                   | 75                          | 11       | 38   | 380   | 12       | 42   | 420   | 47               | 114  | 1,140 | 47               | 114  | 1,140 |

The results in Table 11 indicate that a northbound right turn lane is possibly justified in the existing condition on GA 53 at Sportsman Club Road and almost certainly justified on GA 53 at Ahaluna Drive. The increase in volumes to the no-build condition will increase the justification for these right turn lanes. The Lanier Tract will add trips to each intersection and create the fourth approaches at the median breaks at Avonlea Way and Canterbury Road. Table 10 suggests that a northbound right turn lane is likely to be justified at the Avonlea Way access but not at the Canterbury access with the development of the Lanier Tract. With the development of the retail outparcels in Future Phase Two, a northbound right turn lane is also expected to be justified at the Canterbury access.

Table 12, below, is Table 4-8 from the Driveway Manual, and presents the Georgia DOT right turn lane design standards. Based on the posted 45 mph speed limit, each northbound right turn lane on GA 53 should include 175 feet of full-width storage and a 100 foot taper.

**Table 12 – Georgia DOT Design Standards for Right Turn Lanes**

| Speed, mph | Full Width Storage, ft. | Taper, ft. |
|------------|-------------------------|------------|
| 25         |                         | 50         |
| 30         | 75                      | 50         |
| 35         | 100                     | 50         |
| 40         | 150                     | 50         |
| 45         | 175                     | 100        |
| 50         | 225                     | 100        |
| 55         | 250                     | 100        |
| 60         | 300                     | 100        |
| 65         | 350                     | 100        |

**Table 4-8 Minimum Right Turn Deceleration Lengths**

The site plan also anticipates providing two right-in / right-out RIRO accesses to the office / retail tract and the plan anticipates providing deceleration lanes on GA 53 at both of these accesses. It is recommended that these anticipated deceleration lanes also be constructed to satisfy the Driveway Manual standards.

The project site engineer is referred to the Georgia DOT Driveway Manual for other driveway design standards including driveway width, island design, and curb return radii.

## Summary of Study Findings and Recommendations

The following is a summary of the findings and the recommendations of this traffic impact study at each intersection:

1. **Sportsman Club Road at Strickland Drive** – No changes are recommended at this intersection for the existing, no-build, or Future Phase One and Future Phase Two conditions.
2. **Dawsonville Highway at Sportsman Club Road** – The side street delays at this intersection are significant now and will increase in the future. While a warrant analysis was not performed as part of this traffic impact study, the low side street volumes make the intersection an unlikely candidate for signalization. The potential for justifying signalization will increase in the future, but side street volumes will continue to remain moderate. This study also identifies the need for a northbound exclusive right turn lane to be added on GA 53 at Sportsman Club Road. Northbound and southbound exclusive left turn lanes are currently provided at this median break.
3. **Dawsonville Highway at Avonlea Way** – Side street delays are high at the existing eastbound approach of Avonlea Way, and these delays will increase in the no-build and future conditions. The side street volumes are predominately right turners, with extremely low left turn volumes. The Lanier Tract will introduce a new fourth leg at the Avonlea Way intersection (there is an existing private residential driveway at this median break, which would be replaced by the Lanier Tract access). Northbound and southbound exclusive left turn lanes are currently provided at this median break. The volumes exiting the new Lanier Tract access will be low and many of them will be right turners. Therefore, this intersection is considered unlikely to be a candidate for signalization in the existing, no-build, and Future Phases One and Two, even with the addition of the Lanier Tract trips. The Georgia DOT right turn lane analysis suggests that a northbound exclusive right turn lane should be considered at this access and the site plan includes the addition of this lane. The new site access should be constructed with one entering lane and one exiting lane. The side street approach exiting the site should be controlled by side street stop sign and accompanying stop bar.
4. **Dawsonville Highway at Canterbury Road** – Side street delays are high on the existing eastbound approach of Canterbury Road and these delays will increase in the no-build and future conditions. As with Avonlea Way, the side street volumes at this intersection are predominately right turners, with extremely low left turn volumes. For this reason, this intersection is considered an unlikely candidate for signalization in the existing, no-build, and Future Phase One conditions. The outparcel access will align with Canterbury Road and the Lanier Tract will connect through the outparcels to GA 53 at this location. Northbound and southbound exclusive left turn lanes are currently provided at this median break. A short southbound deceleration lane is provided on GA 53 at Canterbury Road, though this lane does not appear to have been constructed to current Georgia DOT design standards. The northbound right turn volume will be low in the Future Phase One condition, and the Georgia DOT right turn lane analysis indicates that no decel lane will be required for Future Phase One. However, with the future development of the retail outparcels, by others, the right turn volumes will be significant, primarily due to the outparcels, and a northbound deceleration lane is recommended for this location. The Future Phase Two side street volumes exiting the outparcels will

be notable and this intersection will likely be a prime candidate for signalization upon development of the outparcels. It is recommended that at such time as the outparcels are planned to be developed, a signal warrant study be performed for this intersection according to the standards set forth in the Federal Highway Administration's *Manual On Uniform Traffic Control Devices* (MUTCD). This new access at the Canterbury Road median break should be constructed with at least one entering lane and an exiting shared left/through lane and an exclusive right turn lane. The two westbound lanes are in anticipation of the development of the outparcels. With only the Lanier Tract volumes, only one entering and one exiting lane would be required. Until signalization is warranted, the side street approach exiting the outparcel tracts should be controlled by side street stop sign and accompanying stop bar.

5. **Dawsonville Highway at Ahaluna Drive** – The review of Georgia DOT auxiliary lane standards indicates that a northbound right turn lane should be added on GA 53 at Ahaluna Drive in the existing condition. The future volumes exiting Ahaluna Drive would benefit from the addition of a second westbound lane, resulting in a shared left/through lane and an exclusive right turn lane on Ahaluna Drive at GA 53. This second lane would reduce the demand for side street greentime on the signal and improve side street levels of service. It was noted that the need for relocation of the signal steel strain pole, a drainage structure, and possibly a large brick monument sign, may reduce the feasibility of adding this second westbound lane. With the addition of Lanier Tract southbound left turns from GA 53, consideration should be given to adding a protected / permissive southbound left turn phase, which would match the existing protected / permissive phasing for the northbound left turn. The Georgia DOT left turn phase warrants are not satisfied for this southbound left turn based on volume projections alone. However, other factors such as high speeds on GA 53 and the senior residents expected to reside at the Lanier Tract, merit consideration. Field observations suggest that there may be an opportunity to shorten the cycle length, which would reduce time spent by vehicles waiting on the side street.
6. **Dawsonville Highway at North Lake Square Access** – This intersection operates acceptably in all analysis conditions. The side street approaches do incur some delays at all times, primarily due to the long cycle length on the signal, which allocates most of the greentime, appropriately, to GA 53. The side street delays are incurred by minimal volumes in the a.m., since the retail served by the side streets are generally not operational at that time. Higher volumes incur the side street delays in the p.m., when the retail is operational. However, overall this intersection operates appropriately and no mitigation is recommended for any analysis condition.
7. **Dawsonville Highway at Beachwood Boulevard** At the GA 53 / Beechwood Boulevard intersection, it is noted that a fourth leg is currently stubbed-out across from Beechwood Boulevard and a retail development is under construction on that site. Auxiliary left and right turn lanes are provided on GA 53 serving Beechwood Boulevard and the future fourth leg appears to be designed for right-in / right-out access only, with a northbound deceleration lane provided on GA 53. No changes are recommended at this intersection based on this study.
8. **Dawsonville Highway at McEver Road** – The lane configuration and signal phasing at this intersection are generally appropriate. The existing southbound right turn volume is sufficiently-high (828 a.m., 481 p.m.) to

merit consideration of the addition of a second exclusive right turn lane and/or the addition of a protected right turn overlap phase. The justification for adding this phasing and/or second right turn lane will increase as volumes increase. Finally, there may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.

9. **Dawsonville Highway at Green Hill Circle** – This signalized intersection incurs high sides street delays, again, due to the allocation of the majority of greentime to the Dawsonville Highway approaches. There may be an opportunity to reduce the cycle length and fine-tune the signal timing at this intersection.
10. **Dawsonville Highway at Shallowford Road** – The lane configuration and signal phasing are appropriate for this intersection. Reduction of the cycle length and optimization of the allocation of greentime could reduce delays and queuing at this intersection.

### Intersection Analysis Methodology

# Intersection Analysis Methodology

The methodology used for evaluating traffic operations at intersections is presented in the Transportation Research Board’s *Highway Capacity Manual*, 2010 edition (HCM 2010). Synchro 8 software, which emulates the HCM 2010 methodology, was used for all analyses. The following is an overview of the methodology employed for the analysis of signalized intersections and stop-sign controlled (unsignalized) intersections.

## Signalized Intersections

The criteria for evaluating signalized intersections are capacity and level of service. The capacity analysis of an intersection compares the volume of traffic using the various lane groups at the intersection to the capacity of those lane groups. This produces a volume-to-capacity (v/c) ratio for each lane group. A v/c ratio greater than 1.0 indicates that the volume of traffic has exceeded the capacity available and indicates a temporary excess of demand. The HCM 2010 methodology computes a critical v/c ratio for an intersection based on the critical lane groups or approaches. This critical v/c ratio is an indication of overall intersection sufficiency.

Level of service for a signalized intersection is defined in terms of control delay per vehicle. For signalized intersections, a composite intersection level of service is determined. The thresholds for each level of service are higher for signalized intersections than for unsignalized intersections. This is attributable to a variety of factors including expectation and acceptance of higher delays at signals, and the fact that drivers can relax when waiting at a signal as opposed to having to remain attentive as they proceed through the unsignalized intersection. The level of service criteria for signalized intersections are shown in Table A.

**Table A – Level of Service Criteria for Signalized Intersections**

| Control Delay (s/veh) | Level of Service by Volume-to-Capacity Ratio |      |
|-----------------------|----------------------------------------------|------|
|                       | ≤1.0                                         | >1.0 |
| ≤ 10                  | A                                            | F    |
| > 10 and ≤ 20         | B                                            | F    |
| > 20 and ≤ 35         | C                                            | F    |
| > 35 and ≤ 55         | D                                            | F    |
| > 55 and ≤ 80         | E                                            | F    |
| > 80                  | F                                            | F    |

## Unsignalized Intersections

The operations at an unsignalized intersection are defined in terms of levels of service. Level of service (LOS) is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. Level of service for an unsignalized intersection is defined in terms of control delay per vehicle. Control delay is that portion of delay attributable to the control device and includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The delays at unsignalized intersections are based on gap acceptance theory,

factoring in availability of gaps, usefulness of the gaps, and the priority of right-of-way given to each traffic stream.

Levels of service are assigned letters A through F. LOS A indicates operations with very low control delay while LOS F describes operations with high control delay. LOS F is considered to be unacceptable by most drivers, while LOS E is typically considered to be the limit of acceptable delay. The level of service criteria for unsignalized intersections are presented in Table B.

**Table B – Level of Service Criteria for Unsignalized Intersections**

| Control Delay (s/veh) | Level of Service by Volume-to-Capacity Ratio |      |
|-----------------------|----------------------------------------------|------|
|                       | ≤1.0                                         | >1.0 |

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 26 (17%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 16.5

Intersection LOS: B

Intersection Capacity Utilization 73.2%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 5: GA 53 & Lanier Valley Dr/Ahaluna Dr

## Lanier Tract DRI

## 6: 53-Dawsonville Hwy &amp; Academy Sports

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 27 (18%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.67

Intersection Signal Delay: 1.7

Intersection LOS: A

Intersection Capacity Utilization 79.1%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 6: 53-Dawsonville Hwy & Academy Sports

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 19 (13%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.04

Intersection Signal Delay: 37.1

Intersection LOS: D

Intersection Capacity Utilization 81.3%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 8: Dawsonville Highway/GA 53 & McEver Road/McEver

## Lanier Tract DRI

## 9: Dawsonville Highway &amp; Greenhill Circle/Greenhill Circle

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.61

Intersection Signal Delay: 11.6

Intersection LOS: B

Intersection Capacity Utilization 71.6%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 9: Dawsonville Highway & Greenhill Circle/Greenhill Circle

## Lanier Tract DRI

## 10: Dawsonville Highway &amp; Shallowford Rd/Best Buy

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 45 (30%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.58

Intersection Signal Delay: 10.6

Intersection LOS: B

Intersection Capacity Utilization 59.0%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 10: Dawsonville Highway & Shallowford Rd/Best Buy

Lanier Tract DRI  
1: Sportsman Club Road & Strickland Drive

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 129 (81%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 12.7

Intersection LOS: B

Intersection Capacity Utilization 79.8%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 5: GA 53 & Lanier Valley Dr/Ahaluna Dr

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 120 (75%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 115

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 14.8

Intersection LOS: B

Intersection Capacity Utilization 81.6%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 6: 53-Dawsonville Hwy & Academy Sports

## Lanier Tract DRI

## 8: Dawsonville Highway/GA 53 &amp; McEver Road/McEver

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 52 (33%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.38

Intersection Signal Delay: 98.0

Intersection LOS: F

Intersection Capacity Utilization 99.3%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 8: Dawsonville Highway/GA 53 & McEver Road/McEver

Lanier Tract DRI

9: Dawsonville Highway & Greenhill Circle/Greenhill Circle

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 40.7

Intersection LOS: D

Intersection Capacity Utilization 81.6%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 9: Dawsonville Highway & Greenhill Circle/Greenhill Circle

## Lanier Tract DRI

## 10: Dawsonville Highway &amp; Shallowford Rd/Best Buy

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 91 (57%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 48.6

Intersection LOS: D

Intersection Capacity Utilization 81.0%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 10: Dawsonville Highway & Shallowford Rd/Best Buy

## Appendix D

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 26 (17%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 22.3

Intersection LOS: C

Intersection Capacity Utilization 80.9%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 5: GA 53 & Lanier Valley Dr/Ahaluna Dr

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 27 (18%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.74

Intersection Signal Delay: 3.2

Intersection LOS: A

Intersection Capacity Utilization 84.9%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 6: 53-Dawsonville Hwy & Academy Sports

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 19 (13%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.19

Intersection Signal Delay: 45.7

Intersection LOS: D

Intersection Capacity Utilization 87.5%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 8: Dawsonville Highway/GA 53 & McEver Road/McEver

## Lanier Tract DRI

## 9: Dawsonville Highway &amp; Greenhill Circle/Greenhill Circle

no build a.m.

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.69

Intersection Signal Delay: 14.2

Intersection LOS: B

Intersection Capacity Utilization 76.8%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 9: Dawsonville Highway & Greenhill Circle/Greenhill Circle

## Lanier Tract DRI

## 10: Dawsonville Highway &amp; Shallowford Rd/Best Buy

no build a.m.

### Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Offset: 45 (30%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.60

Intersection Signal Delay: 12.5

Intersection LOS: B

Intersection Capacity Utilization 62.6%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 10: Dawsonville Highway & Shallowford Rd/Best Buy

Lanier Tract DRI  
1: Sportsman Club Road & Strickland Drive

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 129 (81%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.86

Intersection Signal Delay: 15.5

Intersection LOS: B

Intersection Capacity Utilization 86.1%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 5: GA 53 & Lanier Valley Dr/Ahaluna Dr

## Lanier Tract DRI

## 6: 53-Dawsonville Hwy &amp; Academy Sports

no build p.m.

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 120 (75%), Referenced to phase 2:NBTL and 6:SBTL, Start of Yellow

Natural Cycle: 135

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.78

Intersection Signal Delay: 16.6

Intersection LOS: B

Intersection Capacity Utilization 87.4%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 6: 53-Dawsonville Hwy & Academy Sports

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 52 (33%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.63

Intersection Signal Delay: 127.3

Intersection LOS: F

Intersection Capacity Utilization 106.7%

ICU Level of Service G

Analysis Period (min) 15

Splits and Phases: 8: Dawsonville Highway/GA 53 & McEver Road/McEver

## Lanier Tract DRI

## 9: Dawsonville Highway &amp; Greenhill Circle/Greenhill Circle

no build p.m.

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 120

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.88

Intersection Signal Delay: 65.1

Intersection LOS: E

Intersection Capacity Utilization 87.9%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 9: Dawsonville Highway & Greenhill Circle/Greenhill Circle

## Lanier Tract DRI

## 10: Dawsonville Highway &amp; Shallowford Rd/Best Buy

no build p.m.

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 91 (57%), Referenced to phase 2:SBTL and 6:NBTL, Start of Yellow

Natural Cycle: 150

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.06

Intersection Signal Delay: 73.1

Intersection LOS: E

Intersection Capacity Utilization 87.3%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 10: Dawsonville Highway & Shallowford Rd/Best Buy
