Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 11.0

Intersection LOS: B

Intersection Capacity Utilization 71.8%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 1: Thompson Bridge & Walmart/Taco Bell

# Thompson Bridge / Enota Convenience

## 2: Thompson Bridge & Enota

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 41 (26%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.93

Intersection Signal Delay: 36.8

Intersection LOS: D

Intersection Capacity Utilization 85.8%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 2: Thompson Bridge & Enota

Thompson Bridge / Enota Convenience  
3: Riverside & Enota

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.99

Intersection Signal Delay: 48.6

Intersection LOS: D

Intersection Capacity Utilization 93.1%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 4: GA 11 Bus & South Enota

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBT, Start of Green

Natural Cycle: 55

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 17.7

Intersection LOS: B

Intersection Capacity Utilization 63.6%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 5: Green/Thompson Bridge & Holly & GA 11 Bus

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.93

Intersection Signal Delay: 26.7

Intersection LOS: C

Intersection Capacity Utilization 96.6%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 6: Green & Ridgewood/driveway

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.79

Intersection Signal Delay: 10.6

Intersection LOS: B

Intersection Capacity Utilization 73.4%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 1: Thompson Bridge & Walmart/Taco Bell

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 41 (26%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.71

Intersection Signal Delay: 13.5

Intersection LOS: B

Intersection Capacity Utilization 72.2%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 2: Thompson Bridge & Enota

Thompson Bridge / Enota Convenience  
3: Riverside & Enota

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 120

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.05

Intersection Signal Delay: 56.4

Intersection LOS: E

Intersection Capacity Utilization 98.7%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 4: GA 11 Bus & South Enota

Thompson Bridge / Enota Convenience  
5: Green/Thompson Bridge & Holly & GA 11 Bus

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.87

Intersection Signal Delay: 28.0

Intersection LOS: C

Intersection Capacity Utilization 72.4%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 5: Green/Thompson Bridge & Holly & GA 11 Bus

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.89

Intersection Signal Delay: 17.3

Intersection LOS: B

Intersection Capacity Utilization 80.7%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 6: Green & Ridgewood/driveway

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.77

Intersection Signal Delay: 11.8

Intersection LOS: B

Intersection Capacity Utilization 75.5%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 1: Thompson Bridge & Walmart/Taco Bell

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 41 (26%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.98

Intersection Signal Delay: 40.6

Intersection LOS: D

Intersection Capacity Utilization 92.1%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 2: Thompson Bridge & Enota

Thompson Bridge / Enota Convenience  
3: Riverside & Enota

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.02

Intersection Signal Delay: 56.6

Intersection LOS: E

Intersection Capacity Utilization 98.1%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 4: GA 11 Bus & South Enota

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBT, Start of Green

Natural Cycle: 55

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 23.3

Intersection LOS: C

Intersection Capacity Utilization 67.4%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 5: Green/Thompson Bridge & Holly & GA 11 Bus

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.99

Intersection Signal Delay: 32.3

Intersection LOS: C

Intersection Capacity Utilization 101.7%

ICU Level of Service G

Analysis Period (min) 15

Splits and Phases: 6: Green & Ridgewood/driveway

|                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |                                                                                     |

# CITY OF GAINESVILLE

## AGENDA REQUEST

---

**Date Submitted:** 4/21/2017

**Presenter:** Matt Tate

**Item of Business:** Request from **Montecito Development** for a special use on a 0.80± acre tract located at the southwest side of the intersection of Enota Avenue and Thompson Bridge Road (a/k/a **1281 Thompson Bridge Road, NW**), having a zoning of Neighborhood Business (N-B).

Ward Number: Two

Tax Parcel Number(s): 01-074-004-020

Request: Convenience store with fuel pumps

**Meeting Date:** 5/9/2017

---

### **Purpose of Request:**

The applicant is proposing a special use within Neighborhood Business (N-B) zoning and is part of the previous rezoning request to construct a 5,200± square foot convenience store with four pump islands. The property is located within the Gateway Corridor Overlay Zone and contains a parking lot which was previously the location of a Long John Silver's restaurant and a bank teller machine. According to the applicant's concept plan, the subject property would be combined with the adjacent property to the rear and access is proposed from Thompson Bridge Road and Enota Avenue. Surrounding uses include a vacant gas station and store, M & R Rentals & Sales, Burger King, Marco's Pizza, Anderson Physical Therapy Associates and Wells Fargo Bank branch.

### **History/Background:**

### **Facts & Issues for Consideration:**

### **Department Recommendation:**

Planning staff is recommending denial of this request. However, if the Board votes to recommend approval of the request, staff has proposed five conditions of zoning.

### **Department Director:**

Rusty Ligon

**GAINESVILLE PLANNING and APPEALS BOARD  
STAFF RECOMMENDATION**

**Applicant** ..... Montecito Development  
**Property Owner** ..... James Paul Mallard  
**Location** ..... 149 Enota Avenue; 1281 Thompson Bridge Road NW  
**Request** ..... (0.48± acres parcel) -Rezone from O-I to N-B with a special use  
**Request** ..... (0.80± acres parcel) -Special use request within N-B zoning  
**Ward** ..... Two  
**Proposed Use** ..... Convenience store with fuel pumps  
**Planning Division Staff Recommendation** ..... **Denial**  
**Date** ..... May 9, 2017

---

▪ **Applicant's Proposal and Background Information**

The applicant's proposal consists of two applications. The first application proposes to rezone a 0.48± parcel from Office and Institutional (O-I) to Neighborhood Business (N-B) with a special use. The second application proposes a special use for a 0.80± acres parcel zoned Neighborhood Business (N-B).

The purpose of the requests is to combine the two properties to construct a 4,200± to 5,200± square foot convenience store with four pump islands. The proposed store is to include a mixture of brick, stone and stucco materials to meet overlay standards. In addition, the proposed fuel canopy will be improved with a pitched roof and the support poles will be faced with stone material to match the building. According to the applicant's concept plan, a two-way access is proposed from Thompson Bridge Road and from Enota Avenue. The existing driveway on Thompson Bridge Road closest to the intersection will be removed. As well, a portion of the existing vegetation to the rear of the property will be removed to provide for parking. A 25-foot wide buffer is proposed adjacent to the neighboring residential property to the south and a 10-foot buffer is proposed adjacent to the office property to the west.

The property is located within the Gateway Corridor Overlay Zone and the front property contains a parking lot which was previously the location of a Long John Silver's restaurant and a bank teller machine. The rear property contains a parking lot and wooded buffer.

**Adjacent Land Use and Zoning**

▪ **Traffic Impact Study Summary**

A Traffic Impact Study was completed for the proposed development on February 23, 2017 and later revised on April 19, 2017 by Marc R. Acampora, PE, LLC Traffic Engineering, at the Thompson Bridge / Enota intersection on Thursday, February 16, 2017. The counts at Thompson Bridge / Walmart, Enota / Riverside, and GA 11 Bus / South Enota were collected on Thursday, March 30, 2017, and the counts at GA 60 / GA 11 Bus and GA 60 / Ridgewood were obtained from another recent traffic study performed in the area, collected on Wednesday, February 22, 2017. Traffic counts were collected from 7:00 A.M to 9:00 A.M. and from 4:30 P.M. to 6:30 P.M.

The only available historic Georgia DOT 24-hour traffic counts were also collected in the vicinity from the year 2015. The annual daily traffic volume on Thompson Bridge Road adjacent to the subject site was 26,500 in 2015 and the AADT on Enota adjacent to the site was 1,760 in 2015.

The study revealed that the peak hour generation for this project was calculated at 153 unadjusted trips or 52 new trips and the 24-hour volume is 4,340 unadjusted trips or 1,574 new trips. The study included the following six intersections.

1. Thompson Bridge Road at Walmart / Taco Bell Access
2. Thompson Bridge Road / Enota Avenue
3. Enota Avenue at Riverside Drive
4. GA 11 Business at South Enota Avenue
5. GA 60 at GA 11 Business
6. GA 60 at Ridgewood Avenue

A summary of the study revealed that future operations, upon the project being fully constructed and operational, will operate at acceptable levels at the intersection of Thompson Bridge Road and Enota Avenue as well as both the both proposed site access locations. Additionally, the Traffic Engineer states that gas station and convenience store would generate less traffic during peak hours than a fast food restaurant would.

**Thompson Bridge Road and Enota Avenue**

The analysis of the Thompson Bridge / Enota intersection shows an overall acceptable level of service in both the existing and future conditions. The side street approaches on Enota Avenue operate at LOS E, primarily due to the green time on the signal favoring the Thompson Bridge Road approaches. 1) Shorter cycle lengths would reduce delays and side street queuing. While there are crosswalks and pedestrian signals on all approaches at this signalized intersection, only the northeast corner has an ADA accessible ramp. 2) Consideration should be given to adding ADA ramps on the remaining corners. 3) The crosswalk and stop bar striping is also in poor condition and should be refreshed.

**Thompson Bridge Road at Site Access**

The site plan calls for the elimination of two of the three existing site accesses on Thompson Bridge Road. This will reduce the number of conflict points. It is likely that most vehicles that wish to travel either northbound on Thompson Bridge or to the east on Enota will exit the site at the Enota driveway and capitalize on the protection of the adjacent signal. Because of the difficulty in making this left turn from the site driveway, and the low numbers of vehicles expected to do so, 1) consideration should be given to prohibiting exiting left turns from this driveway. 2) The Georgia DOT access standards were reviewed for this intersection (Thompson Bridge is Georgia State Route 60) and indicate that the access justifies a southbound exclusive right turn lane. The spacing of this driveway from Enota Avenue does not meet the minimum Georgia DOT driveway spacing standards. It is recommended that these

design factors be discussed with Georgia DOT and the City to determine an acceptable solution. 3) The Thompson Bridge Road site access should be constructed with one entering and one exiting lane and the exiting approach should be controlled by stop sign and accompanying stop bar. The project site engineer is referred to the Georgia DOT Driveway Manual for other driveway design standards including driveway width, island design, and curb return radii.

### **Enota Avenue at Site Access**

The site access on Enota is projected to operate with low volumes and very low delays. Most of the site entering trips will enter at the Thompson Bridge access, so that the entering left turns at the Enota driveway are projected at only 6 vehicles in the a.m. peak hour and 5 in the p.m. peak hour. This should minimally impede westbound through flow on Enota. The eastbound right turns entering the site are also minimal, at 5 for the a.m. peak hour and 8 for the p.m. peak hour. This also should minimally impede flows on Enota. 1) The Enota Avenue site access should be constructed with one entering and one exiting lane and the exiting approach should be controlled by stop sign and accompanying stop bar. 2) The existing grade differential between the site and Enota Avenue at the location of the site access should be corrected when the site is developed.

### ▪ **Other Departmental Comments**

According to the Georgia Department of Transportation (GDOT), the development will be required to meet the sight distance requirements and will need to coordinate with GDOT for review and approval.

According to the Gainesville Public Works Department, the developer will need to coordinate with the Gainesville Public Works Department and the Georgia Department of Transportation (GDOT) prior to permitting to address the future traffic improvements at the intersection of Thompson Bridge Road and Enota Avenue.

### ▪ **Zoning History**

*The following zoning actions have taken place in the immediate area during the last ten years:*

**2016** - A request by Jack Bailey to rezone a 0.61<sup>±</sup> acre tract located at 1665 Thompson Bridge Road NW from Residential-I (R-I) to Office and Institutional (O-I) was approved with conditions for an insurance office.

**2016** - A request by Teresa Vickers for a special use for a hair salon within the Office and Institutional (O-I) zoning district located at 977 and 983 Enota Avenue was approved with conditions.

**2015** - A request by David P. Johnson to rezone a 1.458<sup>±</sup> acres tract located at 1537 and 1551 Thompson Bridge Road; and 135 Virginia Circle from Residential-I (R-I) to Neighborhood Business (N-B) with a special use for restaurant with drive-thru and retail was denied.

**2014** – A request by Polestar Development, LLC to rezone a 1.741<sup>±</sup> acres tract located at 1435 Thompson Bridge Road from Residential-II (R-II) to Regional Business (R-B) for a grocery store and fuel service station was approved with conditions.

**2013** - A request by Michael Slate to rezone a 0.67<sup>±</sup> acre tract located at 971 Lanier Avenue NE from Residential-I (R-I) to Residential and Office (R-O) for a professional office was approved with conditions.

**2012** - A request by WAG Properties, Inc. to annex a 0.68<sup>±</sup> acre tract located at 1868 Thompson Bridge Road for a transportation logistics brokerage was approved with General Business (G-B) zoning.

**2011** - A request by Greg Loyd for a special use for a Dunkin Donut restaurant with a drive thru within the Neighborhood Business (N-B) zoning district located at 1151 Thompson Bridge Road was approved with conditions.

**2011** - A request by Jamie Collins to rezone a 1.149<sup>±</sup> acres tract located at 1452, 1464 and 1472 Thompson Bridge Road NE from Residential-I (R-I) and Neighborhood Business (N-B) to General Business (G-B) for a Taco Bell restaurant was approved with conditions.

**2011** - A request by One Eleven, LLC for a special use for the Little Yellow Coffee House with a drive-thru within the Neighborhood Business (N-B) zoning district located at 996 Thompson Bridge Road was approved with conditions.

**2010** - A request by Pam Abernathy for a special use for a single-family residence within the Office and Institutional (O-I) zoning district located at 1745 Thompson Bridge Road was approved with conditions.

**2010** - A request by Yonah Burger for a special use for a restaurant with a drive-thru within the Neighborhood Business (N-B) zoning district located at 1191 and 1195 Thompson Bridge Road was approved with conditions.

**2009** - A request by Lakewood Baptist Church to rezone a 39.53<sup>±</sup> acres tract located at 2235 Thompson Bridge Road from Residential-I (R-I), Residential-II (R-II) and General Business (G-B) to Planned Unit Development (P-U-D) for future expansion of the church was approved with conditions.

**2009** - A request by Danny Dunagan to annex a 0.89<sup>±</sup> acre tract located at 309 Linwood Road for a 46-unit mini-storage facility was approved with General Business (G-B) zoning.

**2009** - A request by Frenil R. Adajania to rezone a 0.20<sup>±</sup> acre tract located at 0 Thompson Bridge Road from Planned Unit Development (P-U-D) to General Business (G-B) for an existing access driveway was approved.

**2009** - A request by Frenil Adajania to annex a 0.48<sup>±</sup> acre tract located at 1878 Thompson Bridge Road for an existing gas station/convenience store was approved with General Business (G-B) zoning.

**2008** - A request by Danny Allen to rezone a 0.77<sup>±</sup> acre tract located at 1770 and 1786 Thompson Bridge Road from Residential-I (R-I) to Residential and Office (R-O) for residential and office uses was approved with conditions.

**2007** - A request by Lee Dempsey to rezone a 1.5<sup>±</sup> acres tract located at 2200 and 2234 Thompson Bridge Road; and 924 and 934 Etta Vista Circle from Residential-I (R-I) and Residential and Office (R-O) to Neighborhood Business (N-B) with a special use for office/commercial mixed-use development was approved with conditions.

**2007** - A request by Mike Weaver to rezone a 0.6<sup>±</sup> acre tract located at 1750 Thompson Bridge Road from Residential-I (R-I) to Residential and Office (R-O) for an attorney's office was approved with conditions. This request was approved after two previous attempts to rezone the subject property were denied.

**2007** - A request by Ken Selzer to rezone 0.814<sup>±</sup> acre from Residential-I (R-I) to Residential and Office (R-O) for residential and office uses at 1143, 1153, and 1167 Green Street Circle

was denied by the Planning and Appeals Board and the request was withdrawn during City Council first reading.

▪ **Staff Analysis**

**(1) Is the proposed use suitable in view of the zoning and development of adjacent and nearby property?**

The adjacent and nearby uses include single-family residential homes, office, service and commercial uses and are zoned Residential-I (R-I), Residential-II (R-II), Office and Institutional (O-I), Neighborhood Business (N-B) and Regional Business (R-B). The applicants proposed development area extends westerly along Enota Drive toward an established residential district. It appears that the proposed zoning of Neighborhood Business (N-B) may be suitable for neighborhood scale retail uses; however, the addition of fuel pumps is more aggressive.

**(2) Will the proposed use adversely affect the existing use or usability of adjacent or nearby property?**

It is staffs opinion that the proposal would have less of an impact to the surrounding area if the development were confined to the front 0.80± acres parcel and limited to the convenience retail store without fuel sales. However, Neighborhood Business (N-B) zoning could be considered for the rear parcel but should not be combined with the front parcel for the purpose of increasing the developable area to add fuel pumps. The addition of fuel pumps will increase turning movements along Thompson Bridge Road and Enota Avenue at a higher rate compared to a professional office or specialty retail store. The properties most impacted by the proposal appear to be the nearby single-family homes as convenience stores typically have longer business hours create more noise from traffic, fuel/delivery trucks and dumpster usage. The applicant does propose a 25-foot vegetated buffer adjacent to the single-family property.

**(3) Is the proposed use compatible with the purpose and intent of the Comprehensive Plan?**

The proposed development is located within the *Retail/Commercial* land use category. The *Retail/Commercial* land use category includes commercial service activities such as grocery stores, banks, restaurants, theatres, hotels, and automotive related businesses. Commercial uses may be located as a single use in one building or grouped together in a shopping center.

According to the Character Area map for the City of Gainesville, the rear 0.48± acre portion of the subject property is located within the *Traditional Neighborhoods* Character Area, specifically within the *Northern Neighborhoods subarea*. The front 0.80± acre portion of the subject property is located within the *City Park Neighborhood Center* Character Area.

The vision for the *Traditional Neighborhood Character Area* anticipates minimal change, and primary issues within this subarea include incompatible infill development and the threat of encroaching urban sprawl. Commercial encroachment should be minimized and should respect and mirror the small scale of the surrounding neighborhoods, while the purity of the landscape and quality of housing should be preserved. The area is not a primary destination for business; however neighborhood serving business development is encouraged. Land uses allowed include low-density and medium-density residential, and mixed-use / commercial.

The vision for the *City Park Neighborhood Center* Character Area states that Thompson Bridge Road should be transformed into a "Complete Street" with sidewalks, landscaping, bike lanes and transit stops. Preservation of local small businesses should be a priority, and key early commercial buildings targeted for preservation. New commercial development should be compatible with the small scale of the older structures, and parking should be located to the rear with inter-parcel connectivity where possible. The area is not anticipated to see major

economic growth, but remain oriented toward addressing existing neighborhood needs. Businesses providing basic goods and services that neighborhood residents depend on in daily life (for example food, household supplies, medicine etc.) should be encouraged. Locally-owned / family-owned businesses should be promoted to encourage small business investment / entrepreneurship. Land uses allowed include mixed-use, commercial and public/Institutional.

**(4) Are there substantial reasons why the property cannot or should not be used as currently zoned?**

The applicant proposes to rezone a 0.48± parcel from Office and Institutional (O-I) to Neighborhood Business (N-B) with a special use. The second application proposes a special use for a 0.80± acres parcel zoned Neighborhood Business (N-B). The N-B zoning district allows for commercial uses such as a convenience store but does not permit fuel pumps without special use approval. Most of the uses permitted within the Neighborhood Business (N-B) zoning district are not auto-oriented in nature. It appears reasonable that both parcels could be combined or developed separately for those uses currently permitted within the Neighborhood Business (N-B) zoning district.

**(5) Will the proposed use cause an excessive or burdensome use of public facilities or services, including but not limited to streets, schools, water or sewer utilities, and police or fire protection?**

City water, sewer and public safety services are currently provided to the property. Gainesville Fire Station #2 is located off of Holly Drive and is approximately 0.8± miles from the subject property.

The proposed use would have no impact on the school system given that it is a non-residential use.

The proposal will increase ingress and egress traffic movements along Thompson Bridge Road which typically experiences high southbound traffic volumes in the morning and high northbound traffic volumes in the evening. The subject property is located at the southeast corner of Thompson Bridge Road and Enota Avenue. According to the Transportation Master Plan for this area, there are planned intersection improvements which will include the addition of a dedicated right turn lane.

**(6) Is the proposed use supported by new or changing conditions not anticipated by the Comprehensive Plan or reflected in the existing zoning on the property or surrounding properties?**

Commercial growth has occurred along this segment of Thompson Bridge Road since the early-mid 1980's consisting of shopping center development, restaurant, retail, bank, personal service establishments and office uses which are consistent with the proposal. It is anticipated that neighborhood scale commercial growth will continue to occur for property fronting Thompson Bridge Road. There are currently four gas stations within a mile of the subject property, not including the closed gas station adjacent to the subject property.

**(7) Does the proposed use reflect a reasonable balance between the promotion of the public health, safety, morality, or general welfare and the right to unrestricted use of property?**

Based on the Comprehensive Plan and the adjacent Neighborhood Business (N-B) zoning, the proposed rezoning portion of the request appears to reflect a reasonable balance between the promotion of the public health, safety, morality, or general welfare and the right to unrestricted use of property. However, the proposed special use to allow for fueling station does not reflect a balance.

---

### **Additional Criteria**

- (1) The type of street providing access to the subject property is adequate to serve the proposed Special Use.**

Thompson Bridge Road (SR 60) is an arterial road and Enota Avenue is a local connector road. Both roads are adequate to serve the proposed use but will require improvements including a dedicated right turn decel lane. The addition of these lanes may require the proposed buildings and parking to shift to account for change.

- (2) Access into and out of the property adequately provides for traffic and pedestrian safety, the anticipated volume of traffic flow, and access by emergency vehicles.**

The subject property is located at the southwest corner of Thompson Bridge Road and Enota Avenue which currently presents somewhat challenging turning movements into the subject property. Pedestrian crosswalks are present but are not ADA compliant. The applicant's concept plan appears to provide for sufficient access for emergency vehicles with some modifications.

- (3) Public facilities such as schools, water or sewer utilities, and police or fire protection are adequate to serve the Special Use.**

Existing public facilities are adequate to serve the proposed use.

- (4) Refuse, service, parking and loading areas on the property are located and screened to protect other properties in the area from such adverse effects as noise, light, glare or odor.**

The proposed concept plan includes a 25-foot wide landscape buffer adjacent to the single-family property and a 10-foot wide landscape buffer adjacent to the existing office use. The proposed dumpster is to be located behind the proposed building adjacent to the residential property.

- (5) The hours and manner of operation of the Special Use have no adverse effects on other properties in the area.**

The applicant states the proposed hours of operation are for the store to remain open 24 hours a day. An alternative schedule could be from 5 a.m. to 12 a.m. which would reduce the impact somewhat on the adjacent and nearby residential homes. These hours of operation would be in direct conflict with the neighboring residential properties.

- (6) The height, size and location of the buildings or other structures proposed on the property are compatible with the height, size or location of buildings or other structures on neighboring properties.**

The height, size and location of the proposed structures appear consistent with other commercial structures located along Thompson Bridge Road. The adjacent vacant property to the south currently has a fuel island canopy very close to Thompson Bridge Road at a higher elevation. If approved, there will be two fuel island canopies in close proximity to one another.

▪ **Staff Recommendation**

The Planning Division staff is recommending **denial** of this request based on the Comprehensive Plan and the adjacent residential uses. However, if the Planning and Appeals Board were to recommend approval of this request, staff would recommend the following conditions:

**Conditions**

1. The exterior materials and roof pitch of the building and canopy shall adhere to the standards as depicted on the architectural elevation provided with this rezoning application.
2. The hours of operation for the proposed use shall not exceed 5 a.m. to 12 a.m.
3. All access point design along the portion of Thompson Bridge Road and Enota Avenue in front of the property shall require approval by the Georgia Department of Transportation in conjunction with the Gainesville Public Works Director. All required access / traffic / sidewalk improvements associated with the proposed development shall be at the full expense of the developer / property owner.
4. The applicant / owner shall provide for internal parcel vehicular access with the adjacent vacant property located to the south.
5. An updated as-built boundary survey / plat of the subject property, indicating all improvements required for the proposed use, shall be recorded prior to obtaining a Certificate of Occupancy.

## **RE: REZONING AND ANNEXATION APPLICATIONS AND LETTER OF INTENT FOR MONTECITO DEVELOPMENTS, LLC**

Dear Mr. Ligon and Mr. Tate:

This Letter of Intent is written on behalf of the property owner and Applicant, Montecito Developments, LLC (the "Applicant"), in support of the submitted zoning applications and any related variances needed or associated with the proposed zoning site plan (collectively, the "Applications") for the subject property located at 1281 Thompson Bridge Rd., NW and 149 Enota Ave., NW, Gainesville, GA 30501, Hall County Tax Parcel Nos. 01074 004020 and 01074 004001 (the "Property"), totaling approximately 1.5 acres.

The Applicant seeks a rezoning from *O&I and N-B to N-B*, to assemble the two long-vacant parcels to allow for a quality convenience store with gas pumps to serve residents and support the City's commercial tax base. This neighborhood, retail use will have no adverse impacts on surrounding properties. Based on market research, there is a need in this area for a quality, neighborhood convenience store. The Applicant is a developer of the well-received Circle K stores, a "2.0" model that provides modern amenities, design and store layouts to support and provide services to their suburban customer base. The Applicant currently plans to comply with all other buffer and setback requirements as reflected in the current zoning conditions. The proposed store will consist of a convenience store building totaling approximately 5,200 square feet, with 4 pump islands. The convenience store will include food, beverage and coffee options for customers.

The property's vacant status and tax value would be greatly increased with the addition of the proposed commercial development. The requested rezoning for the proposed commercial, convenience store and gas pump uses have a demonstrated history of being entirely suitable and complementary to the other land uses in the area, including the more intense commercial and office uses already permitted as a matter of right. This request is consistent with City's previous decisions and precedent in rezoning this and similarly situated properties in this area, with the current uses permitted under the N-B zoning district, and with the future land use plan for this area, being an existing commercial node.

Letter of Intent  
1281 Thompson Bridge Rd.  
and 149 Enota Ave.  
Montecito Developments, LLC

February 24, 2017  
Page 2 of 2

The property has access to a public water supply, public sanitary sewer, and convenient direct access to collector streets, major thoroughfares and state and interstate highways.

### **Constitutional Objections**

The portions of the City of Gainesville Zoning Ordinances which classify or condition the Property into any more or less intensive zoning classification and/or zoning conditions other than as requested by the Applicant and property owner are and would be unconstitutional in that they would take the Applicant's and property owners' property rights without first paying fair, adequate and just compensation for such rights, in violation of Article I, Section I, Paragraph II of the Constitution of the State of Georgia of 1983, the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States.

The Property is presently suitable for development subject only to the approval of the requested rezoning, as requested and amended by the Applicant and property owners, and is not economically suitable for development under its present zoning and development classification, conditions, regulations, and restrictions due to its location, shape, size, surrounding development, and other factors. A denial of the requested applications would constitute an arbitrary and capricious act by the City of Gainesville without any rational basis therefore, constituting an abuse of discretion in violation of Article I, Section I, Paragraphs I and II of the Constitution of the State of Georgia of 1983 and the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States.

A refusal by the City of Gainesville to approve the Applicant's and property owners' requested rezoning, or to apply additional conditions outside of those proposed or agreed to by the Applicant, so as to prohibit reasonable economic use of the Property, would be unconstitutional and discriminate in an arbitrary, capricious and unreasonable manner as to the Applicant and property owners, in violation of Article I, Section I, Paragraph II of the Constitution of the State of Georgia of 1983 and the Equal Protection Clause of the Fourteenth Amendment to the Constitution.

### **Conclusion**

Applicant respectfully requests approval, and submits the Applications and exhibits in further support of their requests. The Applicant and their representatives welcome the opportunity to meet with City officials and staff to answer any questions.

Respectfully submitted,

**ANDERSEN, TATE & CARR, P.C.**

## Introduction

This study assesses the traffic impact of a proposed convenience store with gasoline pumps in Gainesville, Georgia. The site is located in the southwest corner of the intersection of Thompson Bridge Road (GA 60) and Enota Avenue, as shown in the location map in Figure 1. The project will include a 4,200 square foot convenience store with four gasoline pumps (eight fueling positions). Vehicular access will be provided at one full-movement driveway on the south side of Enota Avenue and one full-movement driveway on the west side of Thompson Bridge Road.

The purpose of this traffic impact study is to determine existing traffic operating conditions in the vicinity of the proposed development, project future traffic volumes, assess the impact of the subject development, then develop conclusions and recommendations to mitigate the project traffic impact and ensure safe and efficient existing and future traffic conditions in the vicinity of the project.

**Figure 1 – Convenience Store Site Location Map**

## Existing Traffic Conditions

Existing traffic operating conditions in the vicinity of the proposed convenience store were assessed. The following is a description of existing transportation facilities, traffic volumes, and intersection operations.

### Study Network

The City of Gainesville's Unified Land Development Code (ULDC) specifies that the study area to be included in a traffic impact study will be determined by calculating the peak hour and daily trips that the project will generate, then applying the table provided in the code, shown as Table 1, below, to determine the distance from the project that must be included in the study area.

**Table 1 – ULDC Study Area Size Requirements**

| Peak Hour Trips Generated | Daily Trips Generated | Distance from Perimeter of Proposed Development Along Roads |
|---------------------------|-----------------------|-------------------------------------------------------------|
| 100 - 150                 | 1,000 – 1,500         | ½ mile                                                      |
| 151 - 500                 | 1,501 – 5,000         | 1 mile                                                      |
| 501 – 1,000               | 5,001 – 10,000        | 2 miles                                                     |
| 1001 or more              | 10,001 or more        | 3 miles                                                     |

from the City of Gainesville ULDC

The trip generation for the proposed development is presented later in this report, summarized in Table 4. The peak hour trip generation for the project was calculated at 153 unadjusted or 52 new trips and the 24-hour volume is 4,340 unadjusted or 1,574 new trips. Based on these numbers, applied to the ULDC standard presented above, the study network was determined to extend for one mile from the limits of the proposed site. The one mile limits were presented to the City and, based on that information, the intersections to be included in this study were agreed upon with the City as follows:

- 1) Thompson Bridge Road at Walmart / Taco Bell Access
- 2) Thompson Bridge Road / Enota Avenue
- 3) Enota Avenue at Riverside Drive
- 4) GA 11 Business at South Enota Avenue
- 5) GA 60 at GA 11 Business
- 6) GA 60 at Ridgewood Avenue

### Description of Existing Roadways

Thompson Bridge Road (Georgia State Route 60) is a principal arterial with a northwest / southeast orientation adjacent to the subject site. The road has two through lanes in each direction, with exclusive left turn lanes in both directions at Enota Avenue. The terrain along the adjacent segment of Thompson Bridge Road is very gently rolling and the posted speed limit is 40 mph in the northbound direction, changing to 45 mph just north

of Enota Avenue. Southbound, the speed limit drops from 45 mph to 40 mph along the frontage of the subject property. There is a traffic signal at the intersection of Thompson Bridge Road and Enota Avenue.

Enota Avenue is a two lane residential street that primarily serves single family subdivisions to the west of Thompson Bridge Road and a mix of single family, multi-family residential, and a school, east of Thompson Bridge Road. The eastbound approach of Enota Avenue has an exclusive left turn lane and a shared through/right at Thompson Bridge Road, while the westbound approach has separate left, through, and right turn lanes. The terrain along Enota Avenue is rolling with a downhill grade on the eastbound approach west of the site access, leveling off at Thompson Bridge Road. The westbound approach has a downhill grade approaching Thompson Bridge Road.

### Pedestrian, Bicycle, and Transit Accessibility

There are no striped designated bicycle lanes on any of the roadways in this traffic study. In the vicinity of the site, sidewalk is located in the northeast corner of the Thompson Bridge / Enota intersection, but not on the other corners. Pedestrian crossing signals and crosswalks are provided on all approaches at the Thompson Bridge / Enota intersection, but only the northeast corner is ADA accessible. There is regularly scheduled mass transit (bus) service (Gainesville Connection, Route 20) along the adjacent section of Thompson Bridge Road and Enota Avenue east of Thompson Bridge Road.

Photographs 1 through 8 are taken at each of the intersections evaluated in this study.

**Photograph 8 – GA 60 Facing North at Ridgewood Avenue**

### Existing Traffic Volumes

Existing full turning movement traffic volume counts were collected at the six intersections previously listed. The counts were collected at the Thompson Bridge / Enota intersection on Thursday, February 16, 2017. The counts at Thompson Bridge / Walmart, Enota / Riverside, and GA 11 Bus / South Enota were collected on Thursday, March 30, 2017, and the counts at GA 60 / GA 11 Bus and GA 60 / Ridgewood were obtained from another recent traffic study performed in the area, collected on Wednesday, February 22, 2017. Observations at the study intersections revealed that the lunchtime/midday peak volumes were visibly lower than the morning and evening peak times. Therefore, this study focused on the busier a.m. and p.m. times, with the logic that these will represent the times of day with the highest delays. The counts were collected at each intersection from 7:00 a.m. to 9:00 a.m. and from 4:00 p.m. to 6:00 p.m. Area schools were in standard session on the days on which the counts were recorded. From the count data, the highest four consecutive 15-minute interval volumes at each intersection, during each time period, were determined. These volumes make up the typical weekday a.m. and p.m. peak hour traffic volumes at that intersection. The existing a.m. and p.m. peak hour turning movement volumes are shown in Figure 2. The raw count data is found in Appendix A.

In addition to the intersection turning movement counts, Georgia Department of Transportation (Georgia DOT) annual average daily traffic (AADT) volume counts were obtained on nearby roadways for the five years from 2011 to 2015 (the latest year for which volumes are available). Table 2 presents the historic Georgia DOT counts and the annual growth rates between the counts.

## Thompson Bridge at Enota Avenue Convenience Store Traffic Impact Study

| avg annual growth |                  | 5.1%          |                            | 1.3%          |                            | 3.1%          |                            | 0.4%          |

The AADT volume on Thompson Bridge adjacent to the subject site was 26,500 in 2015 and the AADT on Enota adjacent to the site was 1,760 in 2015.

#### Existing Intersection Operations

Existing traffic operations were analyzed at the counted intersection using Synchro software, version 8, in accordance with the methodology presented in the Transportation Research Board's 2010 *Highway Capacity Manual (HCM 2010)*. The *HCM 2010* methodology is presented in Appendix B. The results of the analysis are shown in Table 3. Computer printouts containing detailed results of the analysis are located in Appendix C. Levels of service and delays are provided for the overall intersection and for each approach or controlled movement.

**Table 3 – Existing Intersection Operations**

| Intersection / Approach                            | A.M. Peak Hour |               | P.M. Peak Hour |               |
|----------------------------------------------------|----------------|---------------|----------------|---------------|

| westbound approach driveway                        | D              | 49.6          | D              | 40.7          |

The following is a discussion of the results at each intersection:

1. **Thompson Bridge Road at Walmart / Taco Bell** – This signalized intersection is the main access for Walmart and Taco Bell. The intersection operates well in the existing a.m. and p.m. Some delays are incurred on the side street approaches primarily due to the signal timing, appropriately, heavily favoring the northbound and southbound approaches on Thompson Bridge Road. The side street left turn lanes are extremely short, especially on the Taco Bell approach, which only provides storage for one automobile. This is generally not problematic due to the relatively low side street approach volumes. The pedestrian signal head in the southeast corner (closest to Taco Bell), for pedestrians crossing the Taco Bell access, is very difficult to see in daylight and it is recommended that this pedestrian signal head be adjusted to improve its visibility. It is also noted that the southbound approach of Thompson Bridge Road does not include an exclusive right turn lane to serve the Walmart access. This is presumably due to topographic constraints in the Walmart property. Based on the southbound right turn volume and the given conditions, a southbound right turn lane would be justified at this location according to Georgia DOT standards.
  
2. **Thompson Bridge Road at Enota Avenue** – The analysis of the Thompson Bridge / Enota intersection shows an overall acceptable level of service. The side street approaches on Enota Avenue operate at LOS E, again, primarily due to the greentime on the signal favoring the Thompson Bridge Road approaches. Two changes to the signal operations at this intersection would be beneficial. First, the 160 second cycle length is lengthy and the Synchro analysis suggests that cycle lengths of 80 to 100 seconds are more optimal. Shorter cycle lengths would also reduce side street queuing. It is recognized that the cycle length is dependent on other signals in the corridor and spot changes at individual intersections may not be appropriate. Also, three of the four approaches (all but westbound Enota Avenue) have protected / permissive left turn phasing. There would be a modest operational benefit, and a potential safety improvement, to adding this phasing to the westbound approach. It was also noted in the field that some adjacent intersections have been converted to the flashing permissive left turn arrow, but this intersection has not.
  
3. **Enota Avenue at Riverside Drive** – This all-way stop intersection operates well in the a.m., but at LOS F in the p.m. The volumes at this intersection are such that exclusive turn lanes are appropriate for several movements. However, to avoid confusion about right-of-way, it is generally not advisable to add multiple approach lanes at an all-way stop sign-controlled intersection. This intersection may be a candidate for signalization. It is recommended that a signal warrant analysis be performed for this intersection according to the standards proscribed in the Federal Highway Administration's *Manual On Uniform Traffic Control Devices* (MUTCD). Should signalization be justified, consideration could be given to providing turn lanes, as appropriate. With a simple two-phase signal and no additional turn lanes, this intersection would operate at LOS B in the a.m. peak hour and LOS A in the p.m. peak hour. It is noted that Enota Avenue has received traffic calming treatment including highly-visible pedestrian crossings with speed humps. The all-way stop at the Enota / Riverside intersection provides a traffic calming function which may be diminished if this intersection was signalized. A roundabout is an alternative method of control that merits consideration at this intersection. The analysis of a

roundabout at this intersection reveals excellent operations, with LOS A in the a.m. and LOS B in the p.m.

4. **GA 11 Bus at South Enota Avenue** – There are no exclusive right turn lanes on either GA 11 Bus approach at this intersection. The northbound right turn volumes (114 a.m., 48 p.m.) and, even more significantly, the southbound right turn volumes (171 a.m., 250 p.m.) on GA 11 Bus justify the addition of these exclusive right turn lanes. The addition of these lanes will reduce overall intersection delays by about 10 seconds per vehicle in each time period and will eliminate the a.m. northbound LOS F. The signal includes protected/permissive phasing on all but the northbound approach, which has permissive-only phasing. This is acceptable given the low northbound left turn volumes on GA 11 Bus.
5. **GA 60 (Thompson Bridge Road / Green Street) at GA 11 Business** – This large intersection is the fork at which GA 11 Business (Riverside Drive) splits from GA 60 (Thompson Bridge Road). This intersection generally operates acceptably with the existing lanes and control. The southbound right turn volume into Holly Drive operates beyond the signal control. The volume of these right turners are high enough to justify a southbound exclusive right turn lane on GA 60, according to Georgia DOT standards. No other mitigation is recommended at this intersection.
6. **GA 60 (Green Street) at Ridgewood Avenue** – This overall intersection operates acceptably, especially given the tight urban design and lack of exclusive turn lanes. Northbound left turns from GA 60 receive a protected/permissive phasing on the signal and, with the modest northbound left turn volume, this generally provides acceptable operations. However, should a left turner not reach the intersection and complete their left turn movement during the protected portion of the phase, that left turner can significantly impede the through traffic in that lane. Likewise, eastbound Ridgewood Avenue only includes a single lane and, at times, notable queuing was observed on this approach. Ideally, from a traffic operations perspective, this intersection would be widened to include a northbound exclusive left turn lane on GA 60, a second eastbound lane on Ridgewood, and a southbound right turn lane on GA 60. These changes would reduce overall delays and eliminate the LOS F on the Ridgewood approach. However, it is acknowledged that this widening would alter the historic character of this intersection. Therefore, these improvements are suggested for consideration in the context of the overall character and goals of the community.

## Project Traffic Characteristics

This section describes the anticipated traffic characteristics of the proposed convenience store, including a site description, how much traffic the project will generate, and where that traffic will travel.

### Project Description

The proposed development will consist of a 4,200 square foot convenience store with four gasoline pumps (eight fueling positions). Access to the property will be provided by a full movement driveway on Enota Avenue and a full movement driveway on Thompson Bridge Road. The site plan is presented in Figure 3.

**Figure 3 – Site Plan**

It is noted that the current site has three accesses on Thompson Bridge Road – an enter-only lane right at the corner, an exit-only lane a few feet to the south, then a full-movement access at the south property line. The proposed convenience store site plan calls for closing the two accesses near the Enota intersection and preserving just the one full-movement access at the south end of the property. The property also has a single, existing full movement access on Enota Avenue, which will be preserved.

## Trip Generation

Trip generation is an estimate of the number of entering and exiting vehicular trips that will be generated by the proposed development. The volume of traffic that will be generated by the proposed convenience store was calculated using the rates and equations in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9<sup>th</sup> Edition. ITE Land Use 853 – Convenience Market with Gasoline Pumps was applied. The trip generation was calculated both by using square footage as the independent variable and also using number of fueling positions as the independent variable. The square footage yielded the higher peak hour trip volumes while the fueling positions yielded the higher 24-hour volumes. The average number of fueling positions in the ITE data was 7 for the a.m. peak hour and 8 for the p.m. peak hour data (this site plan calls for 8). The average square footage in the ITE data was 3,000. Since no equations were available and the average rates were, therefore, employed, it was decided to use the number of fueling positions as the independent variable, since the average size of that variable more-closely mirrored that of the proposed development.

The trip generation was adjusted to account for pass-by trips. Pass-by trips are trips to the proposed convenience store that are currently driving on Thompson Bridge Road and Enota Avenue and which will turn into the site for retail / gasoline purchases, then continue on the trip they are already making. The ITE *Trip Generation Manual* provides data for calculating pass-by percentages. This data showed an average pass-by percentage in the a.m. peak hour of 63% and average in the p.m. peak hour of 66%. These high percentages are logical given the nature of the development. The a.m. percentage of 63% was also applied to the 24-hour volumes. Table 4 summarizes the trip generation calculations for the proposed development. The calculations include the raw trips for the convenience store and the pass-by percentages.

**Table 4 – Project Trip Generation**

| Land Use                               | ITE Code | Size                | A.M. Peak Hour |            |            | P.M. Peak Hour |            |             | 24-Hour       |
|----------------------------------------|----------|---------------------|----------------|------------|------------|----------------|------------|-------------|---------------|
|                                        |          |                     | In             | Out        | Total      | In             | Out        | Total       | 2-Way         |
| Convenience Market with Gasoline Pumps | 853      | 8 fueling positions | 67             | 66         | 133        | 76             | 77         | 153         | 4,340         |
| -pass-by                               |          | 63%/66%/63%         | <u>-42</u>     | <u>-42</u> | <u>-84</u> | <u>-50</u>     | <u>-51</u> | <u>-101</u> | <u>-2,766</u> |
| Total New Trips                        |          |                     | 25             | 24         | 49         | 26             | 26         | 52          | 1,574         |

## Trip Distribution and Assignment

The trip distribution percentages indicate what proportion of the project's trips will travel to and from various directions. The new trip distribution percentages were developed based on the locations and proximity of likely trip origins and destinations, primarily residential development in the area, and the routes of travel to and from those areas. The pass-by trips were assigned based on the prevailing flows passing the site. The project trips, shown in Table 4, were assigned to the roadway network based on the trip distribution percentages. The project trip distribution percentages and the a.m. and p.m. peak hour trips expected to be generated by the project are shown in Figure 4.

Figure 4 – Project Trip Distribution Percentages and Weekday A.M. and P.M. Peak Hour Site Trips

## Future Traffic Conditions

The historic growth trends identified previously in Table 2, were used to develop an annual growth rate in traffic volumes of 3%, or a total of 6.1% for the projected two year project build-out horizon. This growth rate was applied to the counted volumes at the counted study intersections and at the site access locations. Then, the site traffic volumes were added to these volumes. The site volumes, shown in Figure 4, were added to the 2019 background volumes. This produces the future volumes that will be at each study intersection after the convenience store is built and operational. These future volumes are shown in Figure 5.

Figure 5 – Future Weekday A.M and P.M. Peak Hour Traffic Volume Projections

## Future Intersection Operations

An operational analysis was performed for the anticipated 2019 future project build-out year, at the study intersections and the proposed site accesses. Table 5 presents the results of this analysis. Computer printouts containing detailed results of the analysis are located in Appendix D.

**Table 5 – Future Intersection Operations**

| Intersection / Approach                            | A.M. Peak Hour |               | P.M. Peak Hour |               |
|----------------------------------------------------|----------------|---------------|----------------|---------------|

| northbound approach exiting site       | A        | 9.3          | B        | 10.6         |

The following is a discussion of these results at each intersection:

- 1. Thompson Bridge Road at Walmart / Taco Bell** – This intersection will continue to operate well in the future a.m. and p.m. Some increases in delays will be experienced on the side street approaches, again primarily due to the signal timing, appropriately, heavily favoring the northbound and southbound approaches on Thompson Bridge Road. No other changes, beyond those identified in the existing analysis, are recommended for this intersection.
- 2. Thompson Bridge Road at Enota Avenue** – The Thompson Bridge / Enota intersection will continue to operate acceptably with the addition of the traffic from the proposed convenience store. The addition of an eastbound exclusive right turn lane along the subject site frontage would prevent right turners from becoming trapped behind eastbound through vehicles. The side street approaches would experience a slight improvement in levels of service with this right turn lane, but reductions in delays on the Thompson Bridge approaches and for the overall intersection would be minimal.
- 3. Enota Avenue at Riverside Drive** – The delays will increase at this intersection in the future, though it is noted that the proposed convenience store will add only a modest volume of new trips to this intersection (17 in the a.m. peak hour, total in all directions, and 18 in the p.m. peak hour). Consistent with the existing recommendations, this intersection would benefit from signalization or a roundabout.
- 4. GA 11 Bus at South Enota Avenue** – The delays at this intersection will also increase in the future, and, as with the Enota / Riverside intersection, the proposed development will add only a small volume of new trips here. The discussion of the exclusive right turn lanes in the existing analysis is still applicable for the future condition. No additional changes are recommended.
- 5. GA 60 (Thompson Bridge Road / Green Street) at GA 11 Business** – This intersection will generally continue to operate acceptably in the future. No other mitigation is recommended at this intersection for the future.
- 6. GA 60 (Green Street) at Ridgewood Avenue** – This intersection will operate in the future comparably to existing conditions. The delays on the eastbound Ridgewood approach will increase and be

unacceptable. The existing analysis discussion about widenings at this intersection are still applicable for the future condition, with no additional changes identified.

**7. Thompson Bridge Road at Site Access** – The assignment of site trips assumed that no left turners would exit the site driveway onto Thompson Bridge Road. Without a specific exiting left turn prohibition, a few vehicles may attempt this movement. However, with the high volumes and number of lanes to cross on Thompson Bridge, it is considered highly probable that most vehicles that wish to travel either northbound on Thompson Bridge or to the east on Enota will exit the site at the Enota driveway and capitalize on the protection of the adjacent signal. Because of the difficulty in making this left turn from the site driveway, and the low numbers of vehicles expected to do so, consideration should be given to prohibiting exiting left turns from this driveway. The Georgia DOT access standards were reviewed for this intersection (Thompson Bridge is Georgia State Route 60) and these are presented below.

**8. Enota Avenue at Site Access** – The site access on Enota is projected to operate with low volumes and very low delays. Most of the site entering trips will enter at the Thompson Bridge access, so that the entering left turns at the Enota driveway are projected at only 6 vehicles in the a.m. peak hour and 5 in the p.m. peak hour. This should minimally impede westbound through flow on Enota. The eastbound right turns entering the site are also minimal, at 5 for the a.m. peak hour and 8 for the p.m. peak hour. This also should minimally impede flows on Enota.

#### Site Access Design and Georgia DOT Access Standards

Thompson Bridge Road is Georgia State Route 60, and, therefore, Georgia DOT access standards apply to the Thompson Bridge access. The site is currently served by three access points on Thompson Bridge Road. The two northernmost driveways will be eliminated by the proposed plan, leaving only one access on Thompson Bridge, at the southern end of the property (furthest from Enota Avenue). The standards proscribed in the Georgia DOT's *Regulations for Driveway and Encroachment Control* (Driveway Manual), revision 4.0, dated 3/15/2016, were reviewed for applicable design standards for the site access on GA 60, and are discussed as follows.

There is an existing two way left turn lane on GA 60, which becomes a northbound exclusive left turn lane along the site frontage, serving Enota Avenue. This left turn lane will also serve as the left turn lane for the proposed convenience store. The northbound left turn movement from Thompson Bridge to Enota, at the nearby signal, has a very modest volume (17 existing in each a.m. and p.m. peak hour) and has protected / permissive phasing. This phasing will also provide some protection and gaps for the left turners into the site access. One potential issue is left turners into the site stopping in the left turn lane at the site access, blocking left turners who wish to turn at Enota, but who queue behind the site left turners. This problem is exacerbated by the proximity of the site access to Enota Avenue. Conversely, the potential for this conflict is somewhat mitigated by the modest volumes actually turning left at Enota Avenue.

It is also noted that there is an access to a retail shopping center (Publix) on the east side of GA 60 which is slightly offset to the south from the proposed site access. At this point on the road, the striping indicates a

northbound left turn lane to Enota, and southbound left turners should not be using that lane to turn left into the Publix center. However, there is always the potential for conflict for opposing left turners at the two driveways (Publix and the subject site). Should left turn conflicts present a problem, it may be beneficial to limit the Publix access to right-in / right-out (RIRO) operations. Since the existing northbound left turn lane on GA 60 will serve the site access, no auxiliary lane analysis was performed for the need for this left turn lane.

The Georgia DOT standards for right turn lanes were reviewed for the site access on GA 60. Table 6, below, is Table 4-6 from the Driveway Manual, and proscribes the right turn volume thresholds at which exclusive right turn lanes must be provided.

**Table 6 – Georgia DOT Minimum Volume Requirements for Right Turn Lanes**

| Posted Speed   | 2 Lane Routes |               | More than 2 Lanes on Main Road |               |
|----------------|---------------|---------------|--------------------------------|---------------|
|                | AADT          |               | AADT                           |               |
|                | < 6000        | >=6000        | <10000                         | >=10000       |
| 35 MPH or Less | 200 RTV a day | 100 RTV a day | 200 RTV a day                  | 100 RTV a day |
| 40 to 50 MPH   | 150 RTV a day | 75 RTV a day  | 150 RTV a day                  | 75 RTV a day  |
| 55 to 60 MPH   | 100 RTV a day | 50 RTV a day  | 100 RTV a day                  | 50 RTV a day  |
| >= 65 MPH      | Always        | Always        | Always                         | Always        |

**Table 4-6 Minimum Volumes Requiring Right Turn Lanes**

As reported earlier, the 2015 AADT on Thompson Bridge Road is 26,500 vpd. The southbound right turn volume (RTV) per day at the GA 60 access is calculated as 35% of the site entering new trips ( $35\% \times 787 = 275$ ) plus an estimated 50% of the site entering pass-by trips ( $50\% \times 1,383 = 692$ ) for an entering right turn volume of 967 RTV per day. This substantially exceeds the Georgia DOT threshold of 75 RTV per day. Therefore, an exclusive right turn lane is required at the site access on Thompson Bridge Road according to Georgia DOT standards.

Table 7, below, is Table 4-8 from the Driveway Manual and proscribes the right turn lane design standards. As noted previously, the posted speed limit changes along the subject property frontage, dropping from 45 mph to 40 mph, so the right turn lane would be partially in each speed zone. At 40 mph, the standard for right turn lanes is 150 feet of full-width storage and a 50 foot taper. At 45 mph, the standard is 175 feet of full-width storage and a 100 foot taper. Most of the lane would be in the 45 mph zone and this would provide the more conservative design. However, it is also noted that the distance from the south curb on Enota to the north curb of the site access scales to approximately 150 feet. Therefore, insufficient distance is available to provide the required storage plus taper at either speed standard. The Georgia DOT spacing standards are proscribed in Driveway Manual Table 3-1 – Spacing Criteria for Driveways, Public Road, and Side Streets. At 45 mph, the minimum spacing is 230 feet, which is also not satisfied by the proposed design, either between the site access and Enota Avenue or between the site access and the existing driveway to the property to the south. It is recommended that these design factors be discussed with Georgia DOT and the City to determine an acceptable solution. Consideration should be given to the fact that the proposed plan does eliminate two of the three existing accesses along the subject frontage, thus reducing conflict points and providing an improved design over the existing condition.

**Table 7 – Georgia DOT Design Standards for Right Turn Lanes**

| Speed, mph | Full Width Storage, ft. | Taper, ft. |
|------------|-------------------------|------------|
| 25         |                         | 50         |
| 30         | 75                      | 50         |
| 35         | 100                     | 50         |
| 40         | 150                     | 50         |
| 45         | 175                     | 100        |
| 50         | 225                     | 100        |
| 55         | 250                     | 100        |
| 60         | 300                     | 100        |
| 65         | 350                     | 100        |

**Table 4-8 Minimum Right Turn Deceleration Lengths**

The Thompson Bridge Road site access should be constructed with one entering and one exiting lane and the exiting approach should be controlled by stop sign and accompanying stop bar. As discussed above, consideration should be given to prohibiting exiting left turns at this driveway. The project site engineer is referred to the Georgia DOT Driveway Manual for other driveway design standards including driveway width, island design, and curb return radii.

The site access on Enota Avenue is not located on a Georgia state route and, therefore, Georgia DOT design standards do not apply. This access is located approximately mid-way along the site's Enota frontage. This design is logical since it places the access approximately at the front of the convenience store building. The potential does exist for entering left turners to block the westbound through movement on Enota Avenue. However, due to the low entering left turn volume (6 in the a.m. peak hour, 5 in the p.m. peak hour), this potential is minimal.

The Enota Avenue site access should be constructed with one entering and one exiting lane and the exiting approach should be controlled by stop sign and accompanying stop bar. It is also noted that there is a grade differential between the site and Enota Avenue at the location of the existing access, creating a steep grade and acute crown in the existing apron. This should be addressed by the proposed site plan.

## Conclusions and Recommendations

The traffic impact of this proposed convenience store with gasoline pumps will occur primarily at the site driveways. The impact at adjacent intersections will be minimal to negligible. The reason the impact is so minimal is that the majority of trips to and from the site will be pass-by trips. The nature of this type of convenience store and gasoline station is to attract vehicles that are already passing by the site – it is minimally destination-oriented. Of those trips that are driving specifically to this store, most will be generated very locally. It is improbable that more than just a few trips will travel specifically to this store from more than about one to two miles. Therefore, the new trips from this project at most study intersections will be very low, having minimal effect on traffic operations. The following is a summary of the conclusions and recommendations of at each intersection:

- 1. Thompson Bridge Road at Walmart / Taco Bell** – This intersection operates well in the existing a.m. and p.m. and will continue to operate well in the future. The pedestrian signal head in the southeast corner (closest to Taco Bell), for pedestrians crossing the Taco Bell access, is very difficult to see in daylight and it is recommended that this pedestrian signal head be adjusted to improve its visibility. It is also noted that the southbound approach of Thompson Bridge Road does not include an exclusive right turn lane to serve the Walmart access. Based on the southbound right turn volume and the given conditions, a southbound right turn lane would be justified at this location according to Georgia DOT standards.
- 2. Thompson Bridge Road at Enota Avenue** – The analysis of the Thompson Bridge / Enota intersection shows an overall acceptable level of service in both the existing and future conditions. The side street approaches on Enota Avenue operate at LOS E, primarily due to the greentime on the signal favoring the Thompson Bridge Road approaches. Shorter cycle lengths would reduce delays and side street queuing. While there are crosswalks and pedestrian signals on all approaches at this signalized intersection, only the northeast corner has an ADA accessible ramp. Consideration should be given to adding ADA ramps on the remaining corners. The crosswalk and stop bar striping is also in poor condition and should be refreshed.
- 3. Enota Avenue at Riverside Drive** – This all-way stop intersection currently operates well in the a.m., but at LOS F in the p.m. In the future, these delays will increase. It is recommended that a signal warrant analysis be performed for this intersection according to the standards proscribed in the Federal Highway Administration's *Manual On Uniform Traffic Control Devices* (MUTCD). Should signalization be justified, consideration could be given to providing approach turn lanes, as appropriate. A roundabout is an alternative method of control that merits consideration at this intersection.
- 4. GA 11 Bus at South Enota Avenue** – The existing northbound right turn volumes (114 a.m., 48 p.m.) and, even more significantly, the southbound right turn volumes (171 a.m., 250 p.m.) on GA 11 Bus justify the addition of exclusive right turn lanes.
- 5. GA 60 (Thompson Bridge Road / Green Street) at GA 11 Business** – This intersection generally operates acceptably with the existing lanes and control, and will continue to operate acceptably in the future.

The southbound right turn volume into Holly Drive operates beyond the signal control. The volume of these right turners are high enough to justify a southbound exclusive right turn lane on GA 60, according to Georgia DOT standards. No other mitigation is recommended at this intersection.

**6. GA 60 (Green Street) at Ridgewood Avenue** – This overall intersection operates acceptably, especially given the tight urban design and lack of exclusive turn lanes, but delays are high at times on the eastbound approach of Ridgewood. Ideally, from a traffic operations perspective, this intersection would be widened to include a northbound exclusive left turn lane on GA 60, a second eastbound lane on Ridgewood, and a southbound right turn lane on GA 60. These changes would reduce overall delays and eliminate the LOS F on the Ridgewood approach. However, it is acknowledged that this widening would alter the historic character of this intersection. Therefore, these improvements are suggested for consideration in the context of the overall character and goals of the community.

**7. Thompson Bridge Road at Site Access** – The site plan calls for the elimination of two of the three existing site accesses on Thompson Bridge Road. This will reduce the number of conflict points. It is likely that most vehicles that wish to travel either northbound on Thompson Bridge or to the east on Enota will exit the site at the Enota driveway and capitalize on the protection of the adjacent signal. Because of the difficulty in making this left turn from the site driveway, and the low numbers of vehicles expected to do so, consideration should be given to prohibiting exiting left turns from this driveway. The Georgia DOT access standards were reviewed for this intersection (Thompson Bridge is Georgia State Route 60) and indicate that the access justifies a southbound exclusive right turn lane. The spacing of this driveway from Enota Avenue does not meet the minimum Georgia DOT driveway spacing standards. It is recommended that these design factors be discussed with Georgia DOT and the City to determine an acceptable solution. The Thompson Bridge Road site access should be constructed with one entering and one exiting lane and the exiting approach should be controlled by stop sign and accompanying stop bar. The project site engineer is referred to the Georgia DOT Driveway Manual for other driveway design standards including driveway width, island design, and curb return radii.

**8. Enota Avenue at Site Access** – The site access on Enota is projected to operate with low volumes and very low delays. Most of the site entering trips will enter at the Thompson Bridge access, so that the entering left turns at the Enota driveway are projected at only 6 vehicles in the a.m. peak hour and 5 in the p.m. peak hour. This should minimally impede westbound through flow on Enota. The eastbound right turns entering the site are also minimal, at 5 for the a.m. peak hour and 8 for the p.m. peak hour. This also should minimally impede flows on Enota. The Enota Avenue site access should be constructed with one entering and one exiting lane and the exiting approach should be controlled by stop sign and accompanying stop bar. The existing grade differential between the site and Enota Avenue at the location of the site access should be corrected when the site is developed.

## Appendix A

### Traffic Count Data and Volume Worksheets

# Thompson Bridge Road at Enota Avenue Convenience Store Traffic Impact Study

City of Gainesville, Georgia

April 2017

## Intersection: 1. Thompson Bridge Road at Walmart/Taco Bell

### Intersection Analysis Methodology

## Intersection Analysis Methodology

The methodology used for evaluating traffic operations at intersections is presented in the Transportation Research Board's *Highway Capacity Manual*, 2010 edition (HCM 2010). Synchro 8 software, which emulates the HCM 2010 methodology, was used for all analyses. The following is an overview of the methodology employed for the analysis of signalized intersections and stop-sign controlled (unsignalized) intersections.

### Signalized Intersections

The criteria for evaluating signalized intersections are capacity and level of service. The capacity analysis of an intersection compares the volume of traffic using the various lane groups at the intersection to the capacity of those lane groups. This produces a volume-to-capacity (v/c) ratio for each lane group. A v/c ratio greater than 1.0 indicates that the volume of traffic has exceeded the capacity available and indicates a temporary excess of demand. The HCM 2010 methodology computes a critical v/c ratio for an intersection based on the critical lane groups or approaches. This critical v/c ratio is an indication of overall intersection sufficiency.

Level of service for a signalized intersection is defined in terms of control delay per vehicle. For signalized intersections, a composite intersection level of service is determined. The thresholds for each level of service are higher for signalized intersections than for unsignalized intersections. This is attributable to a variety of factors including expectation and acceptance of higher delays at signals, and the fact that drivers can relax when waiting at a signal as opposed to having to remain attentive as they proceed through the unsignalized intersection. The level of service criteria for signalized intersections are shown in Table A.

**Table A – Level of Service Criteria for Signalized Intersections**

| Control Delay (s/veh) | Level of Service by Volume-to-Capacity Ratio |      |
|-----------------------|----------------------------------------------|------|
|                       | ≤1.0                                         | >1.0 |
| ≤ 10                  | A                                            | F    |
| > 10 and ≤ 20         | B                                            | F    |
| > 20 and ≤ 35         | C                                            | F    |
| > 35 and ≤ 55         | D                                            | F    |
| > 55 and ≤ 80         | E                                            | F    |
| > 80                  | F                                            | F    |

### Unsignalized Intersections

The operations at an unsignalized intersection are defined in terms of levels of service. Level of service (LOS) is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. Level of service for an unsignalized intersection is defined in terms of control delay per vehicle. Control delay is that portion of delay attributable to the control device and includes initial deceleration delay, queue move-up time, stopped delay,

and final acceleration delay. The delays at unsignalized intersections are based on gap acceptance theory, factoring in availability of gaps, usefulness of the gaps, and the priority of right-of-way given to each traffic stream.

Levels of service are assigned letters A through F. LOS A indicates operations with very low control delay while LOS F describes operations with high control delay. LOS F is considered to be unacceptable by most drivers, while LOS E is typically considered to be the limit of acceptable delay. The level of service criteria for unsignalized intersections are presented in Table B.

**Table B – Level of Service Criteria for Unsignalized Intersections**

| Control Delay (s/veh) | Level of Service by Volume-to-Capacity Ratio |      |
|-----------------------|----------------------------------------------|------|
|                       | ≤1.0                                         | >1.0 |
| 0 – 10                | A                                            | F    |
| > 10 and ≤ 15         | B                                            | F    |
| > 15 and ≤ 25         | C                                            | F    |
| > 25 and ≤ 35         | D                                            | F    |
| > 35 and ≤ 50         | E                                            | F    |
| > 50                  | F                                            | F    |

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.74

Intersection Signal Delay: 8.8

Intersection LOS: A

Intersection Capacity Utilization 69.9%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 1: Thompson Bridge & Walmart/Taco Bell

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 41 (26%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.65

Intersection Signal Delay: 11.8

Intersection LOS: B

Intersection Capacity Utilization 68.3%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 2: Thompson Bridge & Enota

Thompson Bridge / Enota Convenience  
3: Riverside & Enota

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.94

Intersection Signal Delay: 47.4

Intersection LOS: D

Intersection Capacity Utilization 93.6%

ICU Level of Service F

Analysis Period (min) 15

Splits and Phases: 4: GA 11 Bus & South Enota

Thompson Bridge / Enota Convenience  
5: Green/Thompson Bridge & Holly & GA 11 Bus

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBT, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 23.1

Intersection LOS: C

Intersection Capacity Utilization 68.4%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 5: Green/Thompson Bridge & Holly & GA 11 Bus

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 15.5

Intersection LOS: B

Intersection Capacity Utilization 76.7%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 6: Green & Ridgewood/driveway

Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 0 (0%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.72

Intersection Signal Delay: 11.0

Intersection LOS: B

Intersection Capacity Utilization 71.8%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 1: Thompson Bridge & Walmart/Taco Bell

### Intersection Summary

Area Type: Other

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 41 (26%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.93

Intersection Signal Delay: 36.8

Intersection LOS: D

Intersection Capacity Utilization 85.8%

ICU Level of Service E

Analysis Period (min) 15

Splits and Phases: 2: Thompson Bridge & Enota

Thompson Bridge / Enota Convenience  
3: Riverside & Enota
